

## Mapping system-level frameworks against proposed population-level framework

|                                 |  |   |   |  |  |
|---------------------------------|--|---|---|--|--|
| Domains and outcome statements: | <b>Safe</b><br>We are safe and free from harm  | <b>Healthy</b><br>We are healthy and well   | <b>Empowered</b><br>We are empowered and able to exercise our capacity  | <b>Connected</b><br>We have strong relationships and are connected to culture and community  | Population-level outcomes framework:         |
| Population outcomes:            | <ul style="list-style-type: none"> <li>- We are free from domestic violence</li> <li>- We are free from abuse and neglect</li> <li>- We are free from crime</li> <li>- We are free from injury, including self-harm</li> </ul> | <ul style="list-style-type: none"> <li>- We have improved physical health</li> <li>- We have improved mental health</li> <li>- We reduced preventable disease</li> <li>- We have reduced substance abuse</li> </ul> | <ul style="list-style-type: none"> <li>- We are empowered to make decisions about our lives and services</li> <li>- We are able to manage our needs</li> <li>- We participate in designing services to meet our needs</li> </ul>  | <ul style="list-style-type: none"> <li>- We have strong personal relationships</li> <li>- We are part of strong, functioning families</li> <li>- We participate in our communities</li> <li>- We feel connected to culture</li> </ul>                  | Examples of aligned system-level frameworks: |
| Population indicators:          | - Decrease in rate of domestic and family violence   | - Eg, decrease in preventable chronic disease   | - Increase in proportion of service users achieving personal goals  | - Increase in rate of participation in community activities  |  |
|                                 | Outcomes framework for children in out-of-home-care  | WAPHA Outcome Framework   | Aboriginal Health and Wellbeing Framework: Implementation Guide   | MHC Mental Health Outcomes   |  |
| System-level outcomes:          | Outcome 1: Children live safely in a stable care arrangement   | Outcome 2: Clients feel better and are better...  | <p><i>Strategic Direction:</i> A culturally respectful and non-discriminatory health system.</p> <p><i>Objective:</i> Aboriginal consumers, carers and communities are effectively engaged in the design, planning and evaluation of programs and services to improve patient satisfaction and quality care</p> | Outcome area 3: People have enriching relationships with others that are important to them such as family, carers, friends and peers   |  |
| System-level indicators:        | Proportion of children who report that they feel safe where they live  | Number and percentage of families with a closed case plan by Aboriginal family status who report they have increased their culturally safe support networks at case closure   | Evidence of health activities undertaken in partnership with Aboriginal stakeholders  | <ul style="list-style-type: none"> <li>- Valued, safe, meaningful, respectful...relationships are developed with support workers, service providers...</li> <li>- Support for family members to access supports and services for themselves</li> </ul> |  |
