

5. The opportunities good climate policy can bring to WA and good examples I know of include:

1. Our Oceans have a greater potential to grow more sea grasses which draw down more carbon than forests.
2. Our Old Growth Forests must be secured from logging. Planting new forest take time before they can be regarded as carbon sinks.  
We must save more of our forests from being sacrificed or cleared for short term mining leases.
3. Hydrogen is the buzz word for 21st century energy we should proceed without delay.

6. My comments on the Issues paper include

West Australia can be innovative and ready for future proofing. We have the science, the space, the sun and wind. We have the people, needing jobs, we have the businesses leading the way already, we need the Government to lead, where the Federal Government hesitates.  
Please legislate to ensure emission reduction now.

7. Conclusion

Respectfully  
Jalie Emley.
