

Wallumbilla Gas Supply Hub & Services

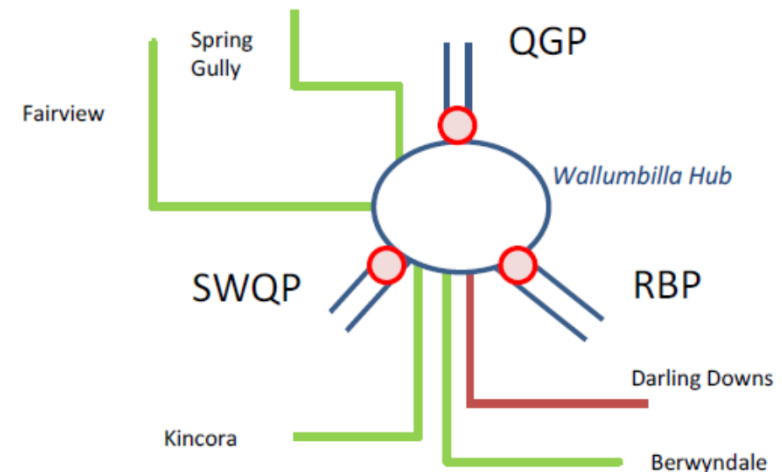

GAB Meeting

20 May 2014

John Jamieson

Wallumbilla Gas Supply Hub

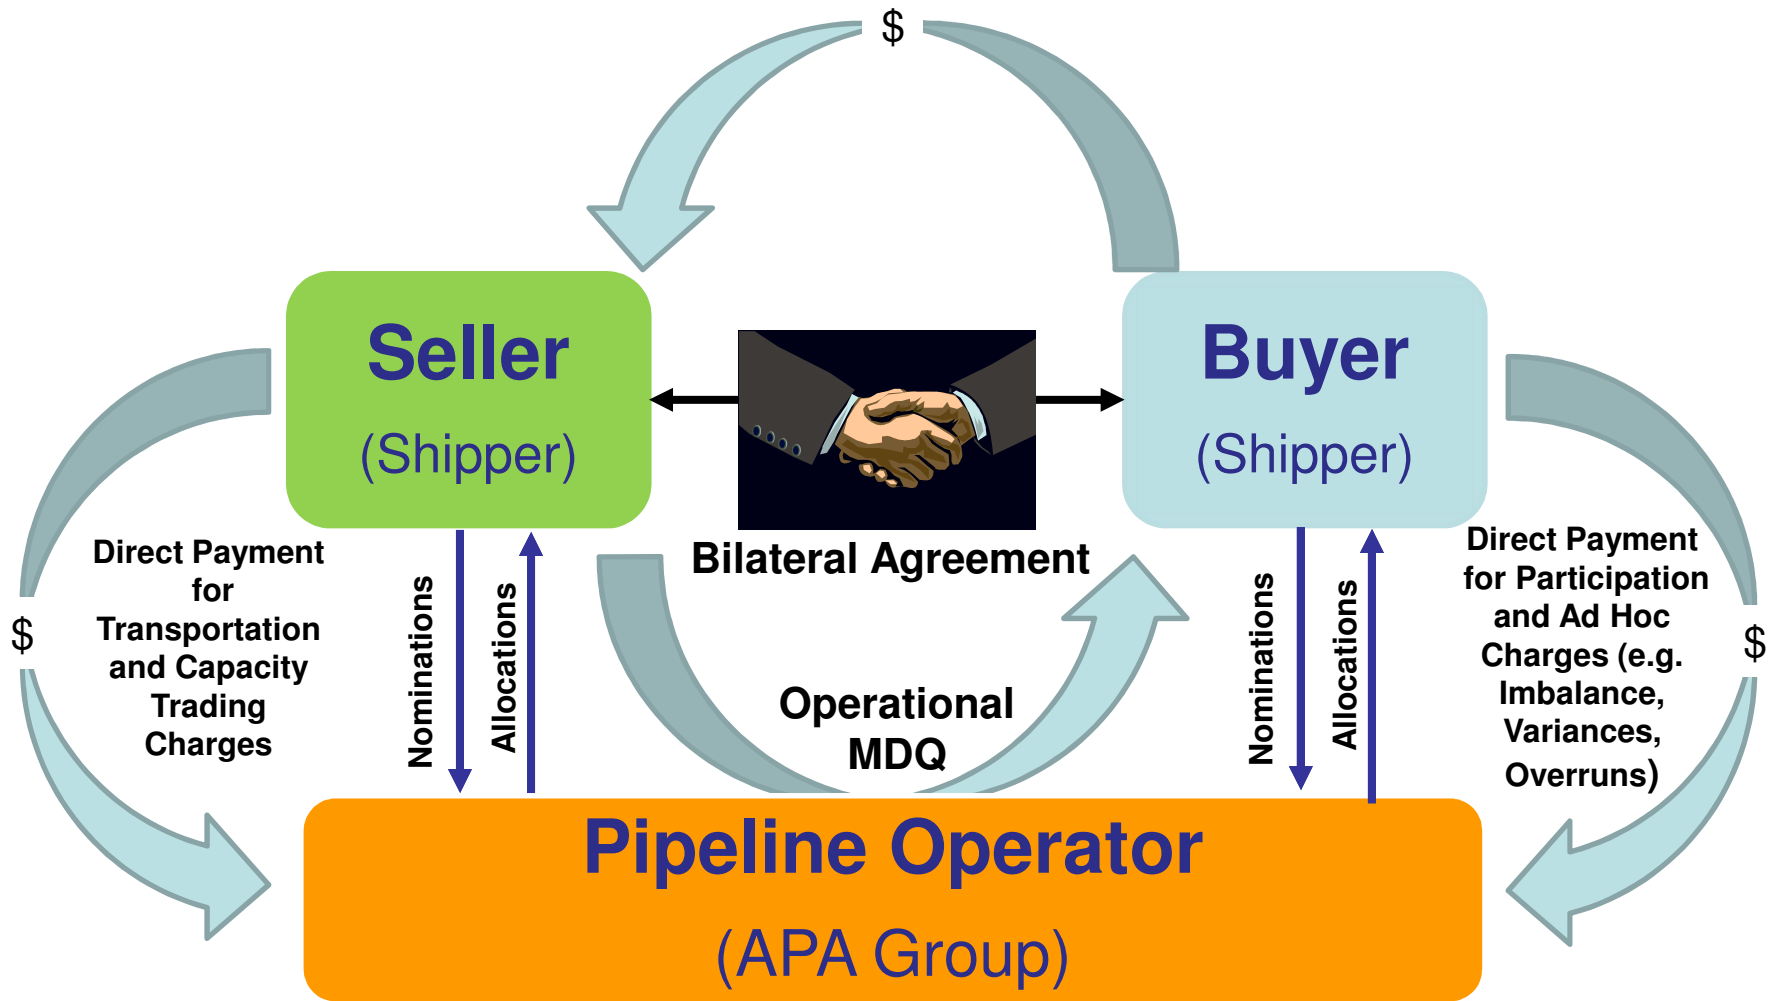

- Voluntary Market which commenced operation on 20 March 2014
- ~ 2 Year development process
- Consists of 3 trading nodes at the inlets to RBP, QGP & SWQP
- Trading to date only on RBP node (~5TJ/d @ ~\$3)

Wallumbilla Gas Supply Hub

- APA is not a direct party to the Market, Shippers incorporate trade volumes into aggregated pipeline nominations - contractual changes were required with shippers to give access to additional receipt points
- APA has introduced new services to help facilitate the market and enhance liquidity;
 - In Pipe Trades – facilitate transfer of title between shippers
 - Capacity Trading – facilitates operational transfer of contracted firm capacity between Shippers via a secondary trading market
 - Capacity Trading Website: <http://capacitytrading.apa.com.au/>

Operational Capacity Transfer Model

Capacity Trading Overview

- All shippers must be signed up to a Gas Transportation Agreement (GTA)
- Only firm forward capacity (MDQ) can be traded
- RBP and SWQP only
- Traditional firm forward MDQ will be split into 'Contract MDQ' and 'Operational MDQ'
- Capacity Trades must be confirmed 24 hours prior to the start of the Gas Day.
- Minimum of 100 GJ per trade and one day duration
- Trades can only be entered into APA systems for up to 90 days in advance
- Capacity trades between specified Receipt and Delivery points
- APA has a public and internal website available for buyers and sellers of capacity to advertise capacity bids and offers
