

# Technical Specification: Operational Data Points for Registered Facilities

WRIG feedback changes

# Feedback and clarifications I

- Technical Specification only intended to apply to new facilities seeking to commence operation after new market go-live.
- Existing IPP Facilities in general require no changes. AEMO is engaging with Participants that may require minor changes to facilitate new market operation.
  - Participants with intending Fast Start Facilities who have not yet approached AEMO, please contact us at [wa.ets@aemo.com.au](mailto:wa.ets@aemo.com.au).
- This document is a guideline. There may be variations from it that are acceptable to AEMO and the Facility, and can be discussed during the Facility connection process, before finalising a set of points to progress with.

# Feedback and clarifications II

- Does this document apply to DER Facilities?
  - Insofar as these Facilities are registered as one of: Scheduled Facility, Semi-Scheduled Facility, and Non-Scheduled Facility.
  - AEMO will continue to review and update this document to cater for new facility types and the outcomes of Project Symphony as needed.
- AGC/ABC Operational Data Point requirements are included in this document. AEMO intends to update the existing AGC/ABC Technical Specification to provide an overview of general AGC/ABC operation in the future.

# Next Steps

- AEMO will incorporate feedback into revision of the document.
- AEMO will publish the provisional document in July as a reference for Participants planning new or upgraded Facilities, prior to the document becoming effective under the revised procedure.
