

Appendix H – Work Zones and Tree Management Plans

Victoria Park-Canning Level Crossing Removal

TREE MANAGEMENT PLAN SUMMARY

September 2022

1.1 ARBORIST SURVEY

Preliminary Tree Survey

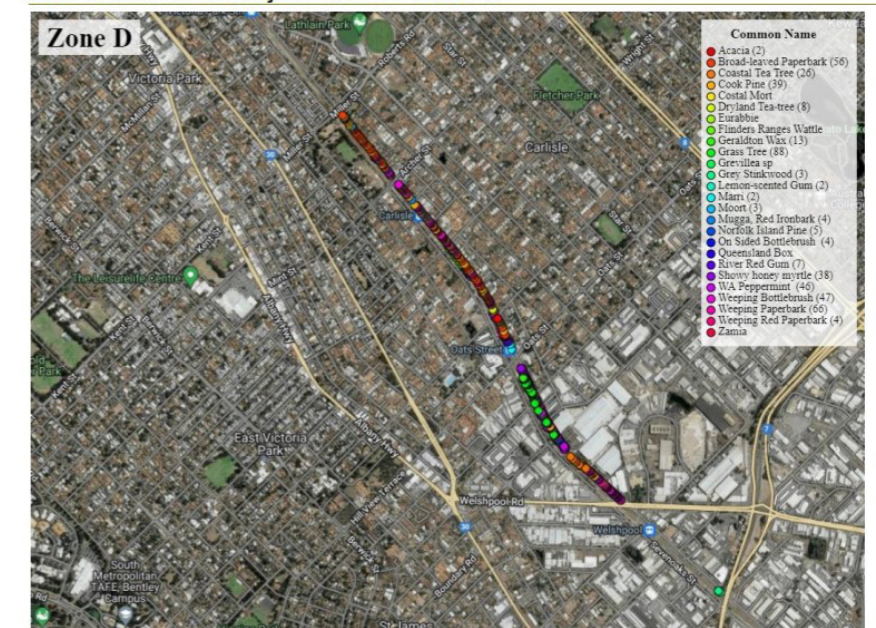

The project arborist has provided a 'Preliminary Arboricultural Report' report including advice on particular trees of value, retention advice and tree protection advice during construction.

The survey includes 3000+ trees captured in & outside rail corridor (PTA, ToVP, CoC & CoG).

Data provided:

- Species
- Health
- Size (height, canopy width, TPZ + RPZ)
- Structure
- Useful life expectancy
- Habitat value
- Black cockatoo foraging species
- Native / exotic
- Arborist notes, comments

Excerpt

Cook Pine Tree ID #116

Tree Details		Tree Location	
Latin Name:	Araucaria columnaris	Longitude:	115.918219
Common Name:	Cook Pine	Latitude:	-31.990519
Tree Age:	Mature	Land Use:	Street Verge
Health:	Fair	Land Type:	Public Area
Structure:	Fair		
Tree Height (Estimated) [m]:	14		
Canopy Spread [m]:	3		
DBH [cm]:	48		
DBH Range:	46-60cm		
Diameter at Root Flare (DRF) [m]:	0.52		
Tree Protection Zone (TPZ) [m]:	5.76		
Structural Root Zone (SRZ) [m]:	2.51		
Useful Life Expectancy:	40+ years		
Origin:	Exotic		
Habitat value:	Low		
QTRA Risk Category:	Broadly Acceptable		
Observation Comments:	Minor uplifting required to provide 2m clearance above ground level		
Notes:			
Foraging species:			

Photos Street View Map View

1.2 MODELLING, COORDINATION & DOCUMENTATION

Arborist survey data imported to shared BIM model. Existing trees geolocated and modelled in 3D for coordination + clash detection with all design disciplines including canopies, RPZs + TPZs.

Trees assessed for protection based on:

- Species
- Health
- Size (height, canopy width, TPZ + RPZ)
- Structure
- Useful life expectancy
- Habitat value
- Black cockatoo foraging species
- Native / exotic
- Valuable / weed species

Extensive design review & coordination has been undertaken and is ongoing with the construction team and all design disciplines against:

- Design & constructability - new station buildings, viaduct, retaining walls, car parks etc.
- CPTED, sightlines + safety
- Gantry crane operations
- Earthworks
- Access + laydown areas
- Utility modification works
- Road & intersection upgrades
- Temporary works

The tree retention plans form part of the Landscape and Urban Design Package. This is a working drawing, subject to change as design progresses. Any departures from these drawings must be approved by the project landscape architect. ALUA will continue to aim to retain as many trees as possible.

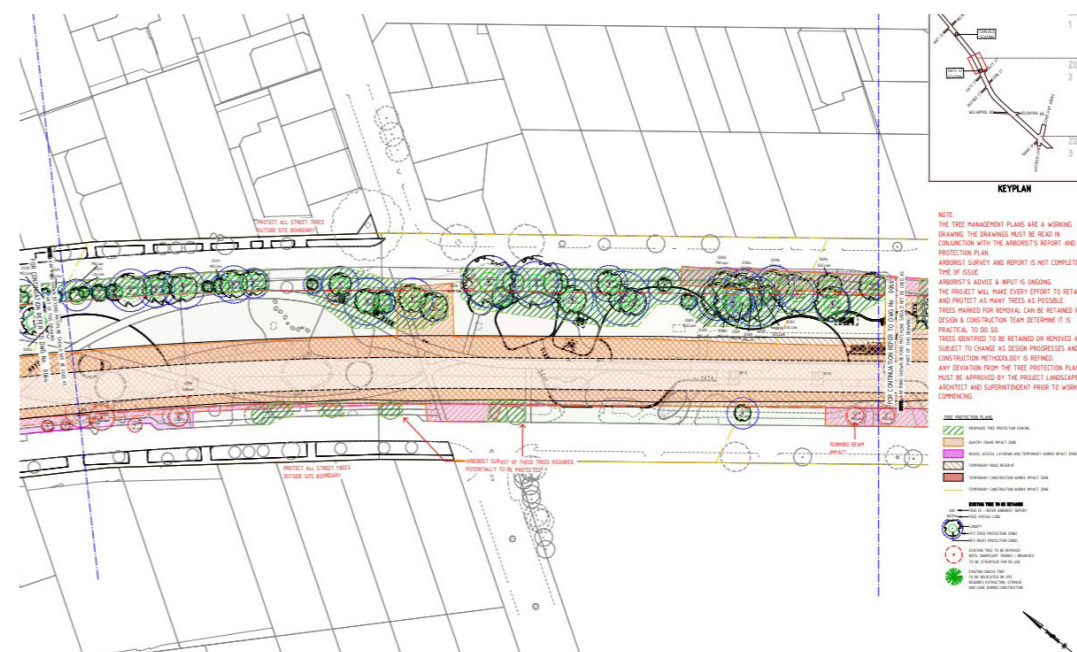

The project arborist is to provide 'Arboricultural Impact Report' & 'Construction Specification' as per AS4970 prior to works on site commencing.

Overview of Tree Management Plans Layout

Station plaza (example extract)

Green Corridor (example extract)

1.3 CONSTRUCTION PHASE

The project arborist is to provide Updated Tree Protection Plan including 'Construction Specification' as per AS4970 prior to works on site commencing.

Protection measures throughout the construction phase include but are not limited to:

- Tree Protection Fencing as per AS4970
- Formative pruning (by qualified arborist) as per AS4373
- Supplemental watering, fertilizing or other treatments as advised by project arborist and as per AS 4970
- Arborist present on site during works within TPZs or SRZs as per AS4970
- Any additional measures outlined in the 'Arboricultural Impact Report'
- Regular site visits by project arborist as per AS4970, 2009 and as set out in the Tree Protection Construction Specification

LEGEND:

- 1 Chain wire mesh panels with shade cloth (if required) attached, held in place with concrete feet.
- 2 Alternative plywood or wooden paling fence panels. This fencing material also prevents building materials or soil entering the TPZ.
- 3 Mulch installation across surface of TPZ (at the discretion of the project arborist). No excavation, construction activity, grade changes, surface treatment or storage of materials of any kind is permitted within the TPZ.
- 4 Bracing is permissible within the TPZ. Installation of supports should avoid damaging roots.

1.0 Introduction

A tree survey was undertaken to pick up the details of trees on the verge and within the Rail corridor along the Armadale Train line from Leach Highway, Welshpool to Miller Street, East Victoria Park (Package 1). The purpose of this tree survey is to inform the design process for the raising of the train line and creation of new public areas.

The survey area has been divided into two sections, with the rail being the divide. "Part C," is the western half of the Rail Corridor and verge and "Part D," being the Eastern half of the rail corridor and adjacent verge. Trees have been number from 1 onwards for each portion

This portion of Track has been surveyed at different times, due to changing requirements of the project, as such the tree numbering is not necessarily concurrent on the map.

This also includes trees around Welshpool Train Station, which are in section 7 and 8, with the trees being numbered 1 to 49.

This report is a combined report of those previously provided on the 6 May, 12 May, and 7 July 2022

2.0 Methodology

This tree survey consisted of a walk-through assessment to collect the following details of trees within 5m of the Rail Corridor Fence from Leach Highway to Miller Street (East and West Verges):

- Age
- Height (in meters),
- Canopy spread
- Diameter of the trunk at breast height and ground level (for determining TPZ and SRZ)
- Health and structure,
- Useful Life Expectancy
- Origin of species
- Habitat Value.
- Foraging – this is noted by exception with a "Yes," otherwise left blank

An aerial assessment and Soil or tissue sampling was not undertaken during this assessment.

2.1 Methodology – Tree Measurements

The height of the tree is an approximate height taken in meters (m)

The canopy spread gives an indication of the general spread of the canopy in meters

The Diameter of the trunk is measures at 1.4m above ground level and at ground level with a DBH tape. This allows for the calculation of the Tree Protection Zone (TPZ) and the Structural Root Zone (SRZ) in line with the Australian Standard for Protection of Trees on Development Sites (AS 497 – 2009) The TPZ and SRZ information is provided with each tree.

2.2 Methodology – Tree Health

- **Good:** The tree will show good to excellent vigour throughout the tree for the species. The tree will exhibit a full and healthy canopy of foliage with only minimal pest or diseases evident.
- **Fair:** The tree is growing in a reasonable condition and shape with adequate canopy foliage for the species. Minor dead wood may be present throughout the crown, with reasonable colour and density when compared to a typical healthy specimen of that species.
- **Poor:** The tree appears to not be growing to its full capability with the canopy potentially visibly showing signs of openness and thinning with excessive amounts of dead or dying limbs. Evidence of established pest and disease issues will be evident or symptoms of stress indicating the tree is in decline.
- **Dead:** No living tissue was found; the tree is dead and should be removed. Unless it is otherwise noted as holding potential as a habitat tree.

2.3 Methodology - Structure

- **Good:** The tree will show good to excellent vigour throughout the tree for the species. The tree will exhibit a full and healthy canopy of foliage with only minimal pest or diseases evident.
- **Fair:** The tree is growing in a reasonable condition and shape with adequate canopy foliage for the species. Minor dead wood may be present throughout the crown, with reasonable colour and density when compared to a typical healthy specimen of that species.
- **Poor:** The tree appears stunted and not growing to its full capability with the canopy potentially visibly showing signs of openness and thinning with excessive amounts of dead or dying limbs. Evidence of established pest and disease issues will be evident or symptoms of stress indicating the tree is in decline.
- **Very poor:** The tree is in a state of decline with the canopy visibly open with considerable deadwood with pest and diseases being present throughout the tree as it enters the final stages of senescing.
- **Has Failed:** The tree is of a significantly poor structural integrity that a failure event was present at time of inspection.

***Determining removal versus retention**

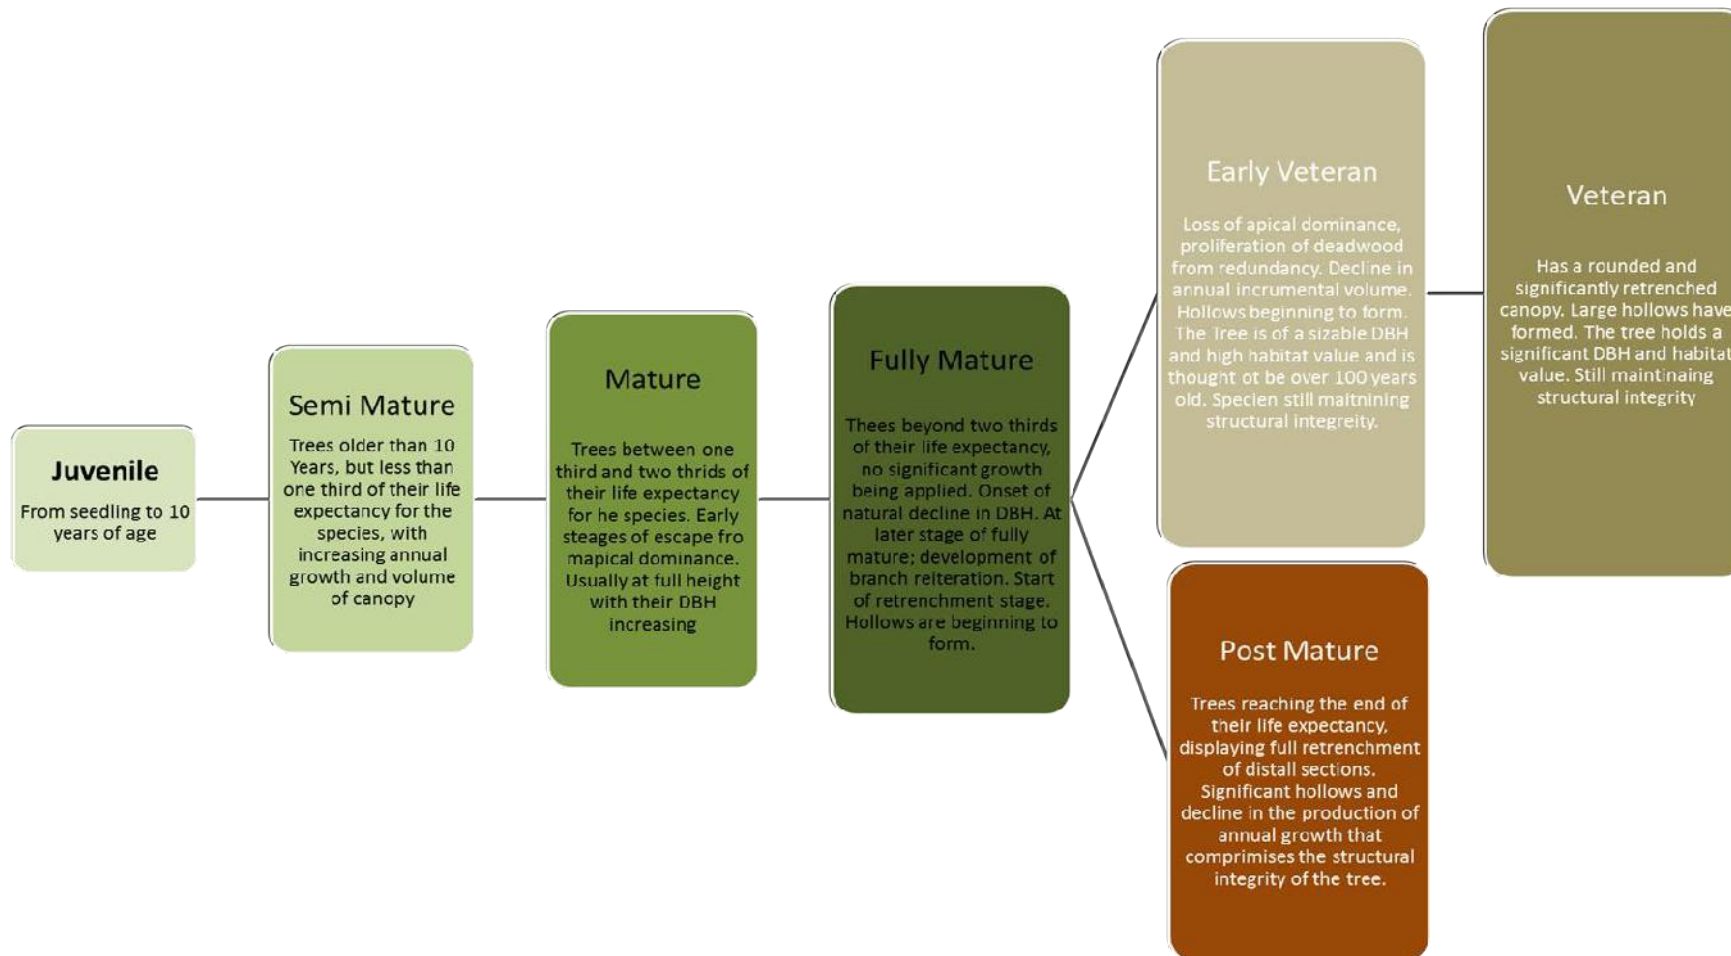

All trees are typically advocated for retention if they are recorded as fair or good in either the Health or structure category.

Where a tree required removal on the ground of poor health or poor structural integrity it will be expressly noted in the Comments section.

In terms of guidance for the removal of trees due to design constraints, where trees are recorded as Poor in terms of Health or Poor or Very Poor in the structure category, should be considered over and above those that rate fair/good in both categories. With the design being altered to retain as many trees as possible.

2.4 Methodology – Age Assessment

The age of the subject trees was assessed against the following categories.

2.5 Useful Life Expectancy

Very Long (Greater than 40 + years)

Very high quality and high value, these trees would hold such a condition that make them a valuable part of the environment/ landscape, would be considered to hold a Useful Life Expectancy (ULE) of greater than 40 years, thus allowing them to make a substantial contribution for a long period of time.

Long (Greater than 20 to 40 years)

High quality and high value, these trees would hold such a condition that make them a valuable part of the environment/ landscape, thus allowing them to make a substantial contribution to for at least 20 years from the time of inspection.

Medium (Between 11 to 20 years)

Medium quality and medium value, trees of this category are thought of as making a good contribution to the area they dwell in and would be considered to hold a ULE of a minimum of 11 years.

Short (Between 6 to 10 years)

Low quality and low value. These trees would be regarded as being in an adequate condition that would see them being retained for a period that would allow new plantings to establish.

Transient (1 to 5 years)

Very Low quality and very low value, these trees would be regarded as having a poor form, displaying a low vitality, and may be exhibiting initial signs of structural decline. They would be considered to have a ULE of less than 5 years and are to be included replacement plan.

Dead or hazardous (no remaining ULE).

Trees in this category would be considered to hold such a condition that would potentially hold no value or in their current state it would be reasonable to undertake their removal for reasons of sound Arboricultural management, due to a high level of risk.

2.6 Origin of species

Native – The definition below is as it is stipulated in the Environmental Protections Act 1986 3(1). native vegetation means indigenous aquatic or terrestrial vegetation, and includes dead vegetation unless that dead vegetation is of a class declared by regulation to be excluded from this definition but does not include vegetation in a plantation;

51A. native vegetation has the meaning given by section 3(1) but does not include vegetation that was intentionally sown, planted or propagated unless —

- (a) that vegetation was sown, planted or propagated as required under this Act or another written law; or
- (b) that vegetation is of a class declared by regulation to be included in this definition;

Exotic – A species of plant that is not indigenous to the Project area, and/or has been planted

2.7 Habitat (Nesting) Value

High value - Trees in this category will have a DBH of 500mm or greater, and/or has hollows of 150mm in diameter or greater.

Medium value. - Trees with a DBH of up to 500mm but not greater than 300mm with hollows of up to 140mm in diameter this also relates to the potential for future significant nesting hollows.

Low Value - Trees with no hollows, holding low nesting values.

2.8 Foraging Species

Trees in the project area have been assessed in regards to their suitability as foraging trees for Forest red-tailed black cockatoo (*calyptorhynchus banksii naso*); - Baudin's cockatoo (*calyptorhynchus baudinii*); - Carnaby's cockatoo (*calyptorhynchus latirostris*); - Peregrine falcon (*falco peregrinus*).

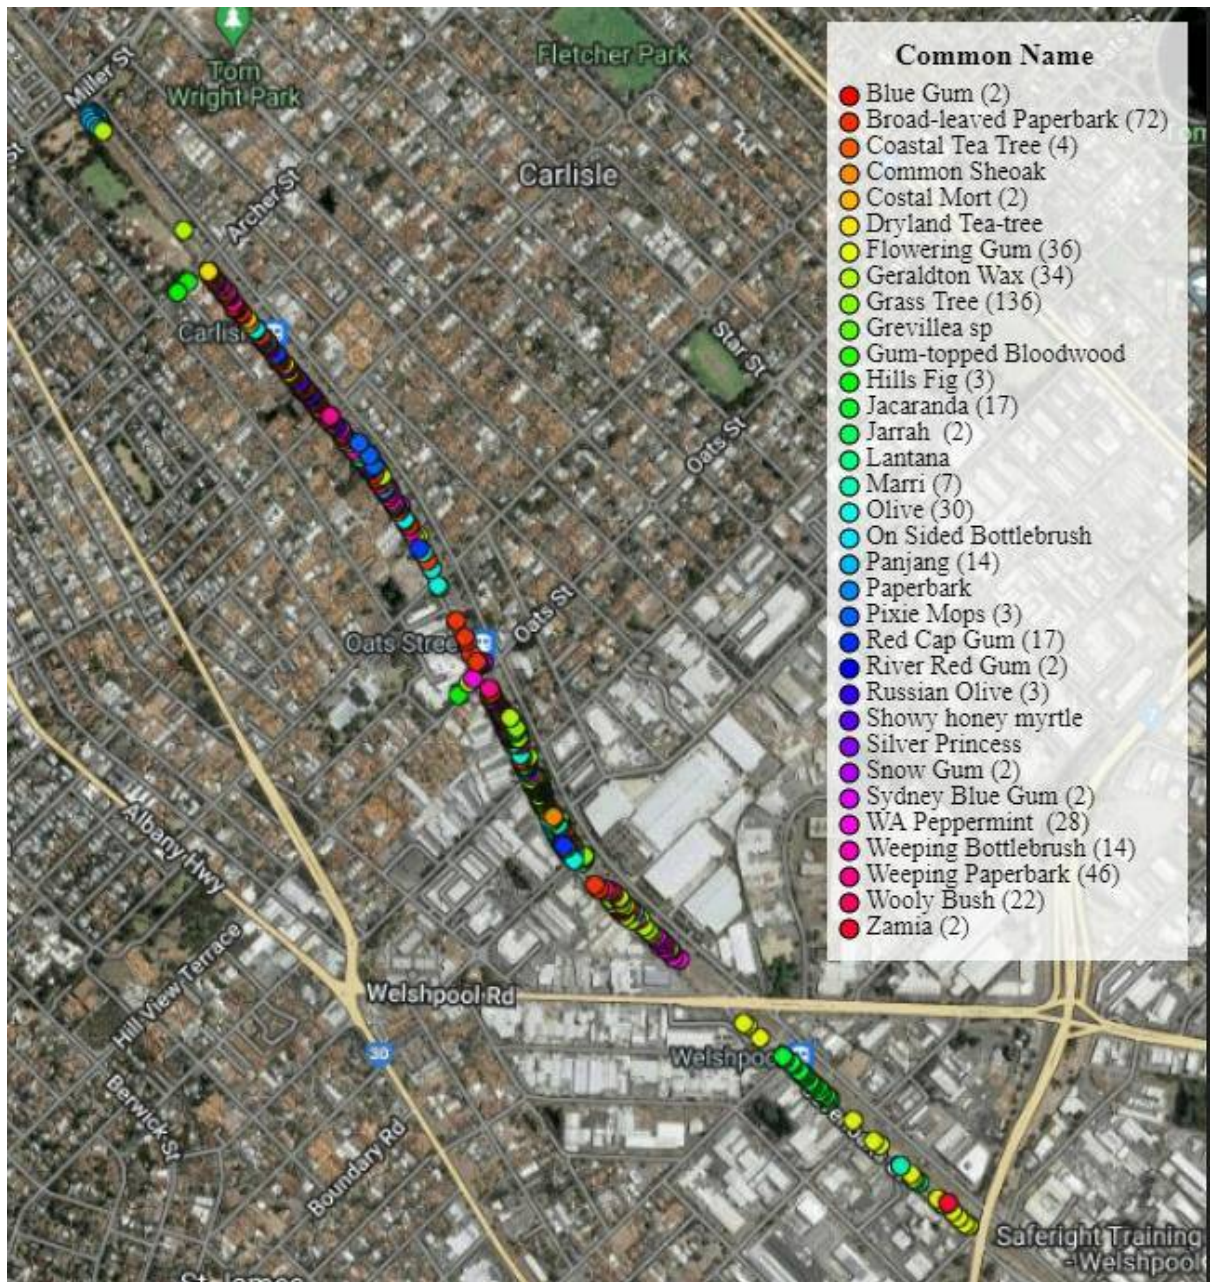

Yes. – Are a suitable tree species for foraging

No – Not a suitable species for foraging

Black Cockatoo foraging tree means native plant species known to be utilised by black cockatoo species for foraging and includes *Corymbia calophylla* (marri), *Eucalyptus marginata*(jarrah), *Eucalyptus* spp., *Banksia* spp., *Allocasuarina* spp., and *Xanthorrhoea* spp

Flowering Gum Tree ID #1

Tree Details	
Latin Name:	Corymbia ficifolia
Common Name:	Flowering Gum
Tree Age:	Semi mature
Health:	Poor
Structure:	Poor
Tree Height (Estimated) [m]:	6
Canopy Spread [m]:	6
DBH [cm]:	37
DBH Range:	30-45cm
Diameter at Root Flare (DRF) [m]:	0.462
Tree Protection Zone (TPZ) [m]:	4.44
Structural Root Zone (SRZ) [m]:	2.39
Useful Life Expectancy:	11-20 years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	This tree is in poor condition, likely due to compacted soil around it remove all grass for radius of 3 m and replace with mulch Myer prime at 1% and remove all dead wood over 25 mm in diameter.
Foraging species:	No

Tree Location

Longitude: 115.927255

Latitude: -31.998454

Olive Tree ID #83

Tree Details

Latin Name:	Olea europaea
Common Name:	Olive
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	5
Canopy Spread [m]:	5
DBH [cm]:	19
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [m]:	0.32
Tree Protection Zone (TPZ) [m]:	2.28
Structural Root Zone (SRZ) [m]:	2.05
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Uplift to provide 2 metres clearance above ground level
Foraging species:	No

Tree Location

Longitude:	115.917799
Latitude:	-31.990824

Broad-leaved Paperbark Tree ID #84

Tree Details

Latin Name:	Melaleuca quinquenervia
Common Name:	Broad-leaved Paperbark
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	6
Canopy Spread [m]:	8.5
DBH [cm]:	40
DBH Range:	30-45cm
Diameter at Root Flare (DRF) [m]:	0.65
Tree Protection Zone (TPZ) [m]:	4.8
Structural Root Zone (SRZ) [m]:	2.76
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Lifting required to provide 2 m of clearance above ground level
Foraging species:	No

Tree Location

Longitude: 115.917764

Latitude: -31.990768

Tree Details

Latin Name:	Melaleuca quinquenervia
Common Name:	Broad-leaved Paperbark
Tree Age:	Juvenile
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	5
Canopy Spread [m]:	2
DBH [cm]:	11.5
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [m]:	0.162
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	1.54
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	No work required
Foraging species:	No

Tree Location

Longitude: 115.916724

Latitude: -31.988872

Weeping Paperbark Tree ID #215

Tree Details	
Latin Name:	Melaleuca leucadendra
Common Name:	Weeping Paperbark
Tree Age:	Juvenile
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	5
Canopy Spread [m]:	2
DBH [cm]:	16.5
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [m]:	0.363
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	2.16
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	No work required
Foraging species:	No

Tree Location

Longitude: 115.916698

Latitude: -31.988881

Olive Tree ID #216

Tree Details	
Latin Name:	Olea europaea
Common Name:	Olive
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	3
Canopy Spread [m]:	39
DBH [cm]:	7.25
DBH Range:	0-8cm
Diameter at Root Flare (DRF) [m]:	0.15
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	1.49
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Remove basal shoots and all Deadwood over 25 mm in diameter.
Foraging species:	No

Tree Location

Longitude: 115.916680

Latitude: -31.988869

[Photos](#) [Street View](#) [Map View](#)

Broad-leaved Paperbark Tree ID #217

Tree Details

Latin Name:	Melaleuca quinquenervia
Common Name:	Broad-leaved Paperbark
Tree Age:	Juvenile
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	4
Canopy Spread [m]:	2
DBH [cm]:	13.5
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [m]:	0.135
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	1.43
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	No work required
Foraging species:	No

Tree Location

Longitude: 115.916705

Latitude: -31.988846

Grass Tree Tree ID #247

Tree Details	
Latin Name:	Xanthorrhoea. Sp
Common Name:	Grass Tree
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	1
Canopy Spread [m]:	1
DBH [cm]:	10
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [m]:	0.1
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	1.26
Useful Life Expectancy:	40+ years
Origin:	Native
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	
Foraging species:	No

Tree Location

Longitude: 115.916643

Latitude: -31.988658

Olive Tree ID #252

Tree Details

Latin Name:	Olea europaea
Common Name:	Olive
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	5
Canopy Spread [m]:	6
DBH [cm]:	22.52
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [m]:	0.55
Tree Protection Zone (TPZ) [m]:	2.7
Structural Root Zone (SRZ) [m]:	2.57
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Remove basil shoots and uplift to provide 2m canopy clearance over the verge
Foraging species:	No

Tree Location

Longitude:	115.916601
Latitude:	-31.988723

River Red Gum Tree ID #274

Tree Details	
Latin Name:	<i>Eucalyptus camaldulensis</i>
Common Name:	River Red Gum
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	5
Canopy Spread [m]:	3
DBH [cm]:	23.65
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [m]:	0.86
Tree Protection Zone (TPZ) [m]:	2.84
Structural Root Zone (SRZ) [m]:	3.11
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	This tree is comprised of multiple suckers from a remnant stump removal and stump grinding is recommended as it will never form a stable tree
Foraging species:	No

Tree Location

Longitude: 115.916463

Latitude: -31.988406

Broad-leaved Paperbark Tree ID #279

Tree Details

Latin Name:	Melaleuca quinquenervia
Common Name:	Broad-leaved Paperbark
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	5
Canopy Spread [m]:	2
DBH [cm]:	15.5
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [m]:	0.26
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	1.88
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Minor uplifting required to provide 2m clearance above ground level.
Foraging species:	No

Tree Location

Longitude: 115.916409

Latitude: -31.988305

Olive Tree ID #280

Tree Details

Latin Name:	Olea europaea
Common Name:	Olive
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	3
Canopy Spread [m]:	3
DBH [cm]:	9.06
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [m]:	0.4
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	2.25
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Minor uplifting required to provide 2m clearance above ground level. Remove basal shoots
Foraging species:	No

Tree Location

Longitude:	115.916344
Latitude:	-31.988236

Blue Gum Tree ID #303

Tree Details	
Latin Name:	Eucalyptus tereticornis
Common Name:	Blue Gum
Tree Age:	Semi mature
Health:	Fair
Structure:	Poor
Tree Height (Estimated) [m]:	7
Canopy Spread [m]:	3
DBH [cm]:	14
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [m]:	0.17
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	1.57
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	This tree is effectively rootstock material where the grafted tree has died and a rootstock has taken over it is recommended to remove this as it will never have a good structure
Foraging species:	No

Tree Location

Longitude: 115.914264

Latitude: -31.984652

Red Cap Gum Tree ID #310

Tree Details

Latin Name:	Eucalyptus erythrocorys
Common Name:	Red Cap Gum
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	7
Canopy Spread [m]:	6
DBH [cm]:	19
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [m]:	0.23
Tree Protection Zone (TPZ) [m]:	2.28
Structural Root Zone (SRZ) [m]:	1.79
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Remove lower shoots to uplift canopy by 2 m above ground level and remove all deadwood over 25 mm in diameter
Foraging species:	No

Tree Location

Longitude:	115.914013
Latitude:	-31.984335

Broad-leaved Paperbark Tree ID #311

Tree Details

Latin Name:	Melaleuca quinquenervia
Common Name:	Broad-leaved Paperbark
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	7
Canopy Spread [m]:	2
DBH [cm]:	12
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [m]:	0.19
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	1.65
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	No work required
Foraging species:	No

Tree Location

Longitude: 115.914031

Latitude: -31.984308

Blue Gum Tree ID #315

Tree Details	
Latin Name:	Eucalyptus tereticornis
Common Name:	Blue Gum
Tree Age:	Semi mature
Health:	Fair
Structure:	Poor
Tree Height (Estimated) [m]:	7
Canopy Spread [m]:	3
DBH [cm]:	22.39
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [m]:	0.37
Tree Protection Zone (TPZ) [m]:	2.69
Structural Root Zone (SRZ) [m]:	2.18
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	This tree is effectively rootstock material where the grafted tree has died and a rootstock has taken over it is recommended to remove this as it will never have a good structure
Foraging species:	No

Tree Location

Longitude: 115.913832

Latitude: -31.984084

Showy honey myrtle Tree ID #372

Tree Details

Latin Name:	Melaleuca nesophila
Common Name:	Showy honey myrtle
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	5
Canopy Spread [m]:	5
DBH [cm]:	18
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [m]:	0.395
Tree Protection Zone (TPZ) [m]:	2.16
Structural Root Zone (SRZ) [m]:	2.24
Useful Life Expectancy:	11-20 years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Minor uplifting required to provide 2m clearance above ground level
Foraging species:	No

Tree Location

Longitude:	115.912091
Latitude:	-31.982189

Broad-leaved Paperbark Tree ID #402

Tree Details

Latin Name:	Melaleuca quinquenervia
Common Name:	Broad-leaved Paperbark
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	9
Canopy Spread [m]:	4.5
DBH [cm]:	25.7
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [m]:	0.35
Tree Protection Zone (TPZ) [m]:	3.08
Structural Root Zone (SRZ) [m]:	2.13
Useful Life Expectancy:	20-40 years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Uplift to provide 2m clearance above ground level
Foraging species:	No

Tree Location

Longitude: 115.911273

Latitude: -31.981427

Broad-leaved Paperbark Tree ID #403

Tree Details

Latin Name:	Melaleuca quinquenervia
Common Name:	Broad-leaved Paperbark
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	6
Canopy Spread [m]:	2
DBH [cm]:	10
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [m]:	0.168
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	1.56
Useful Life Expectancy:	20-40 years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	No work required
Foraging species:	No

Tree Location

Longitude: 115.911254

Latitude: -31.981394

Red Cap Gum Tree ID #404

Tree Details

Latin Name:	Eucalyptus erythrocorys
Common Name:	Red Cap Gum
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	7
Canopy Spread [m]:	6
DBH [cm]:	30
DBH Range:	30-45cm
Diameter at Root Flare (DRF) [m]:	0.36
Tree Protection Zone (TPZ) [m]:	3.6
Structural Root Zone (SRZ) [m]:	2.15
Useful Life Expectancy:	20-40 years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Minor uplifting required to provide 2m clearance above ground level
Foraging species:	No

Tree Location

Longitude:	115.911275
Latitude:	-31.981371

Panjang Tree ID #435

Tree Details

Latin Name:	Acacia lasiocaroa
Common Name:	Panjang
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	1
Canopy Spread [m]:	2
DBH [cm]:	10
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [m]:	0.05
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	0.94
Useful Life Expectancy:	1-5 years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Native shrub
Foraging species:	No

Tree Location

Longitude: 115.907015

Latitude: -31.976800

Weeping Bottlebrush Tree ID #440

Tree Details	
Latin Name:	Callistemon viminalis
Common Name:	Weeping Bottlebrush
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	3
Canopy Spread [m]:	14
DBH [cm]:	11.79
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [m]:	0.172
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	1.58
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Minor uplifting required to provide 2m clearance above ground level
Foraging species:	No

Tree Location

Longitude: 115.911089

Latitude: -31.981200

Weeping Paperbark Tree ID #467

Tree Details	
Latin Name:	Melaleuca leucadendra
Common Name:	Weeping Paperbark
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	6
Canopy Spread [m]:	2
DBH [cm]:	20
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [m]:	0.27
Tree Protection Zone (TPZ) [m]:	2.4
Structural Root Zone (SRZ) [m]:	1.91
Useful Life Expectancy:	11-20 years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Minor uplifting required to provide 2m clearance above ground level
Foraging species:	No

Tree Location

Longitude: 115.909985

Latitude: -31.980053

Weeping Paperbark Tree ID #468

Tree Details	
Latin Name:	Melaleuca leucadendra
Common Name:	Weeping Paperbark
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	7
Canopy Spread [m]:	6
DBH [cm]:	60
DBH Range:	60-75cm
Diameter at Root Flare (DRF) [m]:	0.63
Tree Protection Zone (TPZ) [m]:	7.2
Structural Root Zone (SRZ) [m]:	2.73
Useful Life Expectancy:	11-20 years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Minor uplifting required to provide 2m clearance above ground level and remove basal shoot. This tree could be considered for removal due to the lopping that has destroyed it's form
Foraging species:	No

Tree Location

Longitude: 115.909913

Latitude: -31.979993

Grass Tree Tree ID #82

Tree Details

Latin Name:	Xanthorrhoea. Sp
Common Name:	Grass Tree
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	2
Canopy Spread [m]:	2
DBH [cm]:	10
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [m]:	0.15
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	1.49
Useful Life Expectancy:	40+ years
Origin:	Native
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	
Foraging species:	No

Tree Location

Longitude:	115.918590
Latitude:	-31.991049

Weeping Bottlebrush Tree ID #102

Tree Details	
Latin Name:	Callistemon viminalis
Common Name:	Weeping Bottlebrush
Tree Age:	Mature
Health:	Poor
Structure:	Poor
Tree Height (Estimated) [m]:	6
Canopy Spread [m]:	3
DBH [cm]:	30.01
DBH Range:	30-45cm
Diameter at Root Flare (DRF) [m]:	0.45
Tree Protection Zone (TPZ) [m]:	3.6
Structural Root Zone (SRZ) [m]:	2.37
Useful Life Expectancy:	1-5 years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Removal is recommended due to its poor condition
Foraging species:	No

Tree Location

Longitude: 115.918323

WA Peppermint Tree ID #211

Tree Details	
Latin Name:	<i>Agonis flexuosa</i>
Common Name:	WA Peppermint
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	8
Canopy Spread [m]:	11
DBH [cm]:	82.13
DBH Range:	>75cm
Diameter at Root Flare (DRF) [m]:	0.95
Tree Protection Zone (TPZ) [m]:	9.86
Structural Root Zone (SRZ) [m]:	3.24
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Minor uplifting required to provide 2m clearance above ground level
Foraging species:	No

Tree Location

Longitude: 115.917765

Latitude: -31.989903

Cook Pine Tree ID #307

Tree Details

Latin Name:	Araucaria columnaris
Common Name:	Cook Pine
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	13
Canopy Spread [m]:	5
DBH [cm]:	49.5
DBH Range:	46-60cm
Diameter at Root Flare (DRF) [m]:	0.46
Tree Protection Zone (TPZ) [m]:	5.94
Structural Root Zone (SRZ) [m]:	2.39
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	No work required
Foraging species:	No

Tree Location

Longitude:	115.915730
Latitude:	-31.986171

Broad-leaved Paperbark Tree ID #338

Tree Details

Latin Name:	Melaleuca quinquenervia
Common Name:	Broad-leaved Paperbark
Tree Age:	Mature
Health:	Fair
Structure:	Poor
Tree Height (Estimated) [m]:	10
Canopy Spread [m]:	6
DBH [cm]:	19
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [m]:	0.23
Tree Protection Zone (TPZ) [m]:	2.28
Structural Root Zone (SRZ) [m]:	1.79
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Minor uplifting required to provide 2m clearance above ground level
Foraging species:	No

Tree Location

Longitude:	115.914262
Latitude:	-31.983865

Tree Details

Latin Name:	Melaleuca leucadendra
Common Name:	Weeping Paperbark
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	6
Canopy Spread [m]:	5.5
DBH [cm]:	15
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [m]:	0.27
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	1.91
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Minor uplifting.
Foraging species:	No

Tree Location

Longitude:	115.912636
Latitude:	-31.982099

Broad-leaved Paperbark Tree ID #405

Tree Details

Latin Name:	Melaleuca quinquenervia
Common Name:	Broad-leaved Paperbark
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	12
Canopy Spread [m]:	11
DBH [cm]:	63
DBH Range:	60-75cm
Diameter at Root Flare (DRF) [m]:	0.73
Tree Protection Zone (TPZ) [m]:	7.56
Structural Root Zone (SRZ) [m]:	2.9
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Minor uplift to 2m
Foraging species:	No

Tree Location

Longitude: 115.911197

Latitude: -31.980645

Cook Pine Tree ID #437

Tree Details

Latin Name:	Araucaria columnaris
Common Name:	Cook Pine
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	17
Canopy Spread [m]:	9
DBH [cm]:	49
DBH Range:	46-60cm
Diameter at Root Flare (DRF) [m]:	0.56
Tree Protection Zone (TPZ) [m]:	5.88
Structural Root Zone (SRZ) [m]:	2.59
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	
Foraging species:	No

Tree Location

Longitude:	115.909209
Latitude:	-31.978598

Illawarra Flame Tree Tree ID #500

Tree Details	
Latin Name:	Brachychiton acerifolius
Common Name:	Illawarra Flame Tree
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	5
Canopy Spread [m]:	4
DBH [cm]:	30.5
DBH Range:	30-45cm
Diameter at Root Flare (DRF) [m]:	0.34
Tree Protection Zone (TPZ) [m]:	3.66
Structural Root Zone (SRZ) [m]:	2.1
Useful Life Expectancy:	40+ years
Origin:	Exotic
Habitat value:	Low
QTRA Risk Category:	Broadly Acceptable
Observation Comments:	Remove grass and mulch root zone.
Foraging species:	No

Tree Location

Longitude: 115.923634

Latitude: -31.995082

9.0 Conclusion

510 Trees were picked up on the western side of the train tracks between Miller Street to Leach Highway, Labelled as Part C.

This section has 7 Marri, 2 Jarrah and 14 Red Cap Gums which are foraging species for Forest red-tailed black cockatoo (*calyptorhynchus banksii naso*); - Baudin's cockatoo (*calyptorhynchus baudinii*); - Carnaby's cockatoo (*calyptorhynchus latirostris*); - Peregrine falcon (*falco peregrinus*). No trees were observed to hold any Habitat value for these species of bird.

136 Grass trees are located within this section which would be suitable for transplanting, with the correct preparation and aftercare.

5 Melaleuca, labelled 449, 453 454, 455 and 456 could possibly be transplanted, as they are of a small size and have suitable space around them that would allow for appropriate root preparation to take place, without disturbing other trees.

No other trees are suitable for transplanting due to their location, proximity to other trees and/or size.

11 trees were identified as being in poor condition, Trees 1, 2, 3, 6, 8, 17, 317, 319, 331, 350, 423. Tree 4 is regarded as dead and should be removed.

14 additional trees that were picked up on the western side of the train tracks between Lacey Street to Leach Highway, Labelled as Part C as part of the report of the 6 May 2022 which totals 510

These trees are a Mix of olives, Red Cap Gums, Melaleuca and Ficus

511 Trees were picked up on the eastern side of the train tracks between Miller Street to Leach Highway, Labelled as Part D.

This section has 2 Marri, which are foraging species for Forest red-tailed black cockatoo (*calyptorhynchus banksii naso*); - Baudin's cockatoo (*calyptorhynchus baudinii*); - Carnaby's cockatoo (*calyptorhynchus latirostris*); - Peregrine falcon (*falco peregrinus*). No trees were observed to hold any Habitat value for these species of bird. It is possible that these birds can turn to *E. camaldulensis*, *C. citriodora* and other eucalyptus in the absence of their traditional foraging foods.

8 Queensland Box Trees were picked up in addition to the Trees which were originally picked up on the eastern side of the train tracks between Lacey Street to Leach Highway, Labelled as Part D as part of the report of the 6 May 2022.

No trees were observed to hold any Habitat value for these species of bird.

No trees are suitable for transplanting due to their location, proximity to other trees and/or size within this section with the exception of the 88 Grass Trees, which are mostly within the Rail Corridor.

Trees 1, 2, 3, 12, 94, 102, 145, 204, 205, 276, 280 and 333, are at the end of their useful life and are now either dead or in decline, these should also be removed. 3 Acacias were identified, these could also be considered for removal as they are a relatively short-lived species.

49 trees were picked up as part of A supplementary tree survey around Welshpool Train Station on the 7 July 2022

There are 4 WA Red Flowering Gym and 17 Jacaranda, which are in a suitable condition.

There are 28 Brachychiton that are in a suitable condition for their species. The trees are holding varying amounts of deadwood in their canopies, which is attributable to being grown in sand. Brachychiton prefer a loamy soil that has a higher moisture and nutrient content, which WA Sands do not provide, As such the trees are not in as best aesthetic quality as they could be.

The overall condition of these trees could be improved by removing the grass around them and replacing this with mulch. This will assist in improving the condition of the soil and with moisture retention. This will also remove competition from the grass that would take up any nutrients making with way through the soil before the trees have an opportunity to get it. All trees have been planted as part of landscaping around the station.

On a general level over the two verge areas, there are large amounts of Victorian Tea (*Leptospermum laevigatum*) Tree and Geraldton Wax (*Chamelaucium uncinatum*) which can be regarded as a weed species and over large amounts of ground, preventing other vegetation from growing. It is recommended to remove these two species, as it will open large areas of ground up, increase passive surveillance and improve the amenity of the new areas to be created.

Additionally, the majority of trees and shrubs were observed to require pruning to either begin uplifting of the canopy or full uplifting of their canopies to achieve 2m clearance above ground level. This will also increase passive surveillance into the area that is currently the rial corridor, reduce the build-up of rubbish and prevent undesirable activities, such as drug use by removing areas for people to conceal themselves.

As noted previously, there are only a small number of trees that are suitable to be transplanted, this is mostly due to the close proximity of other trees that would prevent appropriate root preparation from taking place. Should transplanting of any Tree or Gras tree be considered, it needs to be acknowledged that the appropriate root preparation time for trees can be approximately 6 months, followed by 2 years of aftercare. Grass trees can be removed without root preparation but require 6 months of appropriate aftercare when replanted. The transplanting of grass trees carries a high risk of death without the appropriate expertise applied.

Across the site referred to as "Package 1: the following trees were found to have a DBH 500mm in diameter or greater that have the potential (in the long term) to provide nesting habitat for the bird species listed above. As such, these have been noted as holding a "High" Habitat Value.

- Part C, there were 4 Marri, and 2 Jarrah (Numbered: 10, 11, 14, 66, 73, and 95)
- Part D there was on 1 Marri (Numbered: 291)

No Rare or Priority Flora was identified in the area of Package 1 (Leach Highway to Miller Street)

10.0 Glossary of Arboricultural Terminology

Abscission - The shedding of a leaf or other short-lived part of a woody plant, involving the formation of a corky layer across its base; in some tree species twigs can be shed in this way.

Abiotic - Pertaining to non-living agents, e.g., environmental factors.

Absorptive roots - non-woody, short-lived roots, generally having a diameter of less than one millimetre, the primary function of which is uptake of water and nutrients.

Adaptive growth - In tree biomechanics, the process whereby the rate of wood formation in the cambial zone, as well as wood quality, responds to gravity and other forces acting on the cambium. This helps to maintain a uniform distribution of mechanical stress.

Adaptive roots - The adaptive growth of existing roots; or the production of new roots in response to damage, decay or altered mechanical loading.

Adventitious shoots - Shoots that develop other than from apical, axillary, or dormant buds; see also 'epicormic'

Anchorage - The system whereby a tree is fixed within the soil, involving cohesion between roots and soil and the development of a branched system of roots which withstands wind and gravitational forces transmitted from the aerial parts of the tree.

Axil - The place where a bud is borne between a leaf and its parent shoot.

Bacteria - Microscopic single-celled organisms, many species of which break down dead organic matter, and some of which cause diseases in other organisms.

Bark - A term usually applied to all the tissues of a woody plant lying outside the vascular cambium, thus including the phloem, cortex, and periderm; occasionally applied only to the periderm or the phellem.

Basidiomycotina (Basidiomycetes) - One of the major taxonomic groups of fungi.

Bolling - A term sometimes used to describe pollard heads.

Bottle-butt - A broadening of the stem base and buttresses of a tree, in excess of normal and sometimes denoting a growth response to weakening in that region, especially due to decay.

Bracing - The use of rods or cables to restrain the movement between parts of a tree.

Branch:

- **Primary** - A first order branch arising from a trunk or stem
- **Lateral** - A second order branch, subordinate to a primary branch
- **Sub-lateral** - A third order branch, originating from lateral branch

Branch bark ridge - The raised arc of bark tissues that forms within the acute angle between a branch and its parent stem.

Branch-collar - A visible swelling formed at the base of a branch.

Brown-rot - A type of wood decay in which cellulose is degraded, while lignin is only modified.

Buckling - An irreversible deformation of a structure subjected to a bending load.

Buttress zone - The region at the base of a tree where the major lateral roots join the stem, with buttress-like formations on the upper side of the junctions.

Cambium - Layer of dividing cells producing xylem (woody) tissue internally and phloem (bark) tissue externally.

Canker - A persistent lesion formed by the death of bark and cambium due to colonisation by fungi or bacteria.

Canopy species - Tree species that mature to form a closed forest canopy.

Cleaning out - The removal of dead, crossing, weak, and damaged branches, where this will not damage or spoil the overall appearance of the tree.

Compartmentalisation - The chemical confinement of disease, decay, or other dysfunction within a tree's tissue, due to passive and/or active defences operating at the boundaries of the affected region.

Compression fork - An acute angled fork that is mechanically optimised for the growth pressure that two or more adjacent stems exert on each other.

Compression strength - The ability of a material or structure to resist failure when subjected to compressive loading, measurable in trees with special drilling devices.

Compressive loading - Mechanical loading which exerts a positive pressure, the opposite to tensile loading.

Tree Protection Zone - Area from which access is prohibited for the duration of the project to prevent damage to a tree.

Crown/Canopy - The main foliage bearing section of the tree.

Crown lifting - The removal of limbs and small branches to a specified height above ground level.

Crown thinning - The removal of a proportion of secondary branch growth throughout the crown to produce an even density of foliage around a well-balanced branch structure.

Crown reduction/shaping - A specified reduction in crown size whilst preserving, as far as possible, the natural tree shape.

Crown reduction/thinning - Reduction of the canopy volume by thinning to remove selected branches whilst preserving the natural tree shape.

Deadwood - Branch or stem wood bearing no live tissues.

Decurrent - A system of branching in which the crown is borne on a number of major widely spreading limbs of similar size.

Defect - In relation to tree hazards, any feature of a tree which detracts from the uniform distribution of mechanical stress, or which makes the tree mechanically unsuited to its environment.

Delamination - The separation of wood layers along their length, visible as longitudinal splitting.

Dieback - The death of parts of a woody plant, starting at shoot-tips or root-tips.

Disease - A malfunction in or destruction of tissues within a living organism, usually excluding mechanical damage; in trees, usually caused pathogens.

Distal - In the direction away from the main body of a tree or subject organism (cf. proximal)

Dominance - In trees, the tendency for a leading shoot to grow faster or more vigorously than the lateral shoots; also, the tendency of a tree to maintain a taller crown than its neighbours.

Dormant bud - An axial bud which does not develop into a shoot until after the formation of two or more annual wood increments; many such buds persist through the life of a tree and develop only if stimulated to do so.

Dysfunction - In woody tissues, the loss of physiological function, especially water conduction, in sapwood.

DBH (Diameter at Breast Height) - Stem diameter measured at a height of 1.4 metres or the nearest measurable point. Where measurement at a height of 1.4 metres is not possible, another height may be specified.

Endophytes - Micro-organisms that live inside plant tissues without causing overt disease, but in some cases capable of causing disease if the tissues become physiologically stressed.

Epicormic shoot - A shoot having developed from a dormant or adventitious bud and not having developed from a first-year shoot.

Excrecence - Any abnormal outgrowth on the surface of tree or other organism.

Excurrent - In trees, a system of branching in which there is a well-defined central main stem, bearing branches which are limited in their length, diameter, and secondary branching (cf. decurrent).

Fastigate - Having upright, often clustered branches.

Flush cut - A pruning cut which removes part of the branch bark ridge and or branch-collar.

Girdling root - A root which circles and constricts the stem or roots possibly causing death of phloem and/or cambial tissue.

Habit - The overall growth characteristics, shape of the tree and branch structure.

Haloing - Removing or pruning trees from around the crown of another (usually mature or post-mature) tree to prevent it becoming suppressed.

Hazard beam - An upwardly curved part of a tree in which strong internal stresses may occur without being reduced by adaptive growth, prone to longitudinal splitting.

Heartwood/false-heartwood - The dead central wood that has become dysfunctional as part of the aging processes and being distinct from the sapwood.

Heave - The lifting of pavements and other structures by root diameter expansion; also, the lifting of one side of a wind-rocked root-plate.

High canopy tree species - Tree species having potential to contribute to the closed canopy of a mature forest.

Incipient failure - In wood tissues, a mechanical failure which results only in deformation or cracking, and not in the fall or detachment of the affected part.

Included bark (ingrown bark) - Bark of adjacent parts of a tree (usually forks, acutely joined branches or basal flutes) which is in face-to-face contact.

Infection - The establishment of a parasitic micro-organism in the tissues of a tree or other organism.

Internode - The part of a stem between two nodes; not to be confused with a length of stem which bear nodes but no branches.

Lever arm - A mechanical term denoting the length of the lever represented by a structure that is free to move at one end, such as a tree or individual branch.

Lignin - The hard, cement-like constituent of wood cells; deposition of lignin within the matrix of cellulose microfibrils in the cell wall is termed Lignification.

Lions tailing - When a branch of a tree that has few if any side branches except at its end and is thus liable to snap due to end-loading.

Loading - A mechanical term describing the force acting on a structure from a particular source, e.g., the weight of the structure itself or wind pressure.

Longitudinal - Along the length (of a stem, root, or branch).

Lopping - A term often used to describe the removal of large branches from a tree, but also used to describe other forms of cutting

Minor deadwood - Deadwood of a diameter less than 25mm and or unlikely to cause significant harm or damage upon impact with a target.

Mulch - Material laid down over the rooting area of plants to help conserve moisture; mulch may consist of organic matter, or artificial material.

Mycelium - The body of a fungus, consisting of branched filaments (hyphae).

Occlusion - The process whereby a wound is progressively closed by the formation of new wood and bark around it.

Pathogen - A micro-organism which causes disease in another organism.

Photosynthesis - The process whereby plants use light energy to split hydrogen from water molecules and combine it with carbon dioxide to form the molecular building blocks for synthesizing carbohydrates and other biochemical products.

Phytotoxic - Toxic to plants.

Pollarding - The removal of the tree canopy, back to the stem or primary branches, usually to a point just outside that of the previous cutting.

Primary branch - A major branch, generally having a basal diameter greater than 0.25 x stem diameter.

Probability - A statistical measure of the likelihood that a particular event might occur.

Pruning - The removal or cutting back tree parts to growth points.

Rams-horn - In connection with wounds on trees, a roll of occluding tissues which has a spiral structure as seen in cross section.

Reactive Growth/Reaction Wood - Production of woody tissue in response to altered mechanical or external loading.

Residual wall - The amount of non-decayed wood remaining following decay of internal wood

Rib - A ridge of wood that has usually developed because of locally increased mechanical loading. Often associated with internal cracking in the wood of the stem, branch, or root.

Ringbarking (girdling) - The removal of a ring of bark and phloem around the circumference of a stem or branch, normally resulting in an inability to transport photosynthetic assimilates above or below the area of damage.

Ripewood - The older central wood of those tree species in which sapwood gradually ages without being converted to heartwood.

Root-collar - The transitional area between the stem/s and roots.

Root zone - Area of soils containing absorptive roots of the tree/s described. The Primary root zone is that which we consider of primary importance to the physiological well-being of the tree.

Sapwood - Living xylem tissues.

Selective delignification - A kind of wood decay (white-rot) in which lignin is degraded faster than cellulose.

Shedding - In woody plants, the normal abscission, rotting off or sloughing of leaves, floral parts, twigs, fine roots, and bark scales.

Shrub species - Woody perennial species forming the lowest level of woody plants in a forest or garden and not normally considered to be trees.

Simultaneous white rot - A kind of wood decay in which lignin and cellulose are degraded at about the same rate.

Soft-rot - A kind of wood decay in which a fungus degrades cellulose within the cells,

Spores - Propagules of fungi; most spores are microscopic and dispersed in air or water.

Sporophore - The spore bearing structure of fungi.

Stem/s - Principle above-ground structural component(s) of a tree that supports its branches.

Stress - In plant physiology, a condition under which one or more physiological functions are not operating within their optimum range, for example due to lack of water, inadequate nutrition, or extremes of temperature: In mechanics, the application of an external force to an object.

Stringy white-rot - The kind of wood decay produced by selective delignification.

Structural roots - Roots, generally having a diameter greater than 50 millimetres, and contributing significantly to the structural support and stability of the tree.

Structural root zone (ZRZ) - The zone of the root plate most likely to contain roots that are critical for anchorage and the stability of the tree.

Subsidence - In relation to soil or structures resting in or on soil, a sinking due to shrinkage when certain types of clay soil dry out, sometimes due to extraction of moisture by tree roots.

Subsidence - In relation to branches of trees, a term that can be used to describe a progressive downward bending due to increasing weight.

Taper - In stems and branches, the degree of change in girth along a given length.

Targets - In tree risk assessment persons or property or other things of value which might be harmed or damaged by falling parts of a tree

Topping/ Lopping - In arboriculture, the removal of the crown of a tree, or of a major proportion of it.

Torsional stress - Mechanical stress applied by a twisting force.

Translocation - In plant physiology, the movement of water and dissolved materials through the body of the plant.

Transpiration - The evaporation of moisture from the surface of a plant, especially via the stomata of leaves; it exerts a suction which draws water up from the roots and through the intervening xylem cells.

Tree Protection Zone (TRZ) - This is an area left around a tree to ensure protection of the above and below ground parts of the tree during construction works. It will usually include the SRZ and is usually recommended to be fenced off for the period of the works.

Understorey - A layer of vegetation consisting of younger or smaller trees and shrubs which are adapted to grow under lower light conditions.

Understorey tree species - Tree species not having potential to attain a size at which they can contribute to the closed high canopy of a forest or garden.

Vascular wilt - A type of plant disease in which water-conducting cells become dysfunctional.

Vessels - Water-conducting cells in plants, usually wide and long for hydraulic efficiency; generally, not present in coniferous trees.

Vigour - The expression of carbohydrate expenditure to growth (in trees).

Vitality - A measure of physiological condition.

White-rot - A range of kinds of wood decay in which lignin, usually together with cellulose and other wood constituents, is degraded.

Wind exposure - The degree to which a tree or other object is exposed to wind, both in terms of duration and velocity.

Windthrow - The blowing over of a tree at its roots.

Woundwood - Wood with atypical anatomical features, formed in the vicinity of a wound.

11.0 Appendices – QTRA Risk Thresholds

QTRA Advisory Risk Thresholds		
Threshold	Description	Action
1/1.	UNACCEPTABLE Risks will not ordinarily be tolerated	<ul style="list-style-type: none"> • Control the risk
1/1000	Unacceptable (where imposed on others) Risks will not ordinarily be tolerated	<ul style="list-style-type: none"> • Control the risk • Review the risk
	Tolerable (by agreement) Risks may be tolerated if those exposed to the risk accept it, or the tree has exceptional value	<ul style="list-style-type: none"> • Control the risk unless there is broad stakeholder agreement to tolerate it, or the tree has exceptional value • Review the risk
1/10,000	Tolerable (where imposed on others) Risks are tolerable if ALARP	<ul style="list-style-type: none"> • Assess costs and benefits of risk control • Control the risk only where a significant benefit might be achieved at reasonable cost • Review the risk
1/1,000,000	Broadly Acceptable Risk is already ALARP	<ul style="list-style-type: none"> • No action currently required • Review the risk

1.0 Introduction

An assessment was undertaken on a variety of trees within the ALUA project area that stretches from Lacey street in Beckenham, north, to Miller Street in East Victoria Park.

For ease of pick up and identification the area has been divided into 4 zones.

Zone A is west of the Rail tracks and runs from Lacey Street to Leach highway, 36 trees were picked up in this zone.

Zone B is east of the rail and also runs from Lacey Street to Leach highway, this zone has 42 trees.

Zone C is west of the tracks and runs from Leach Highway to Miller Street in East Victoria Park, it contains 474 trees.

Zone D, runs from Leach highway to Miller Street, and is east of the tracks with 469 trees

A Tree Survey Report have been prepared for Zone A and B and another for Zone C and D, which should be referred to whilst reading this document.

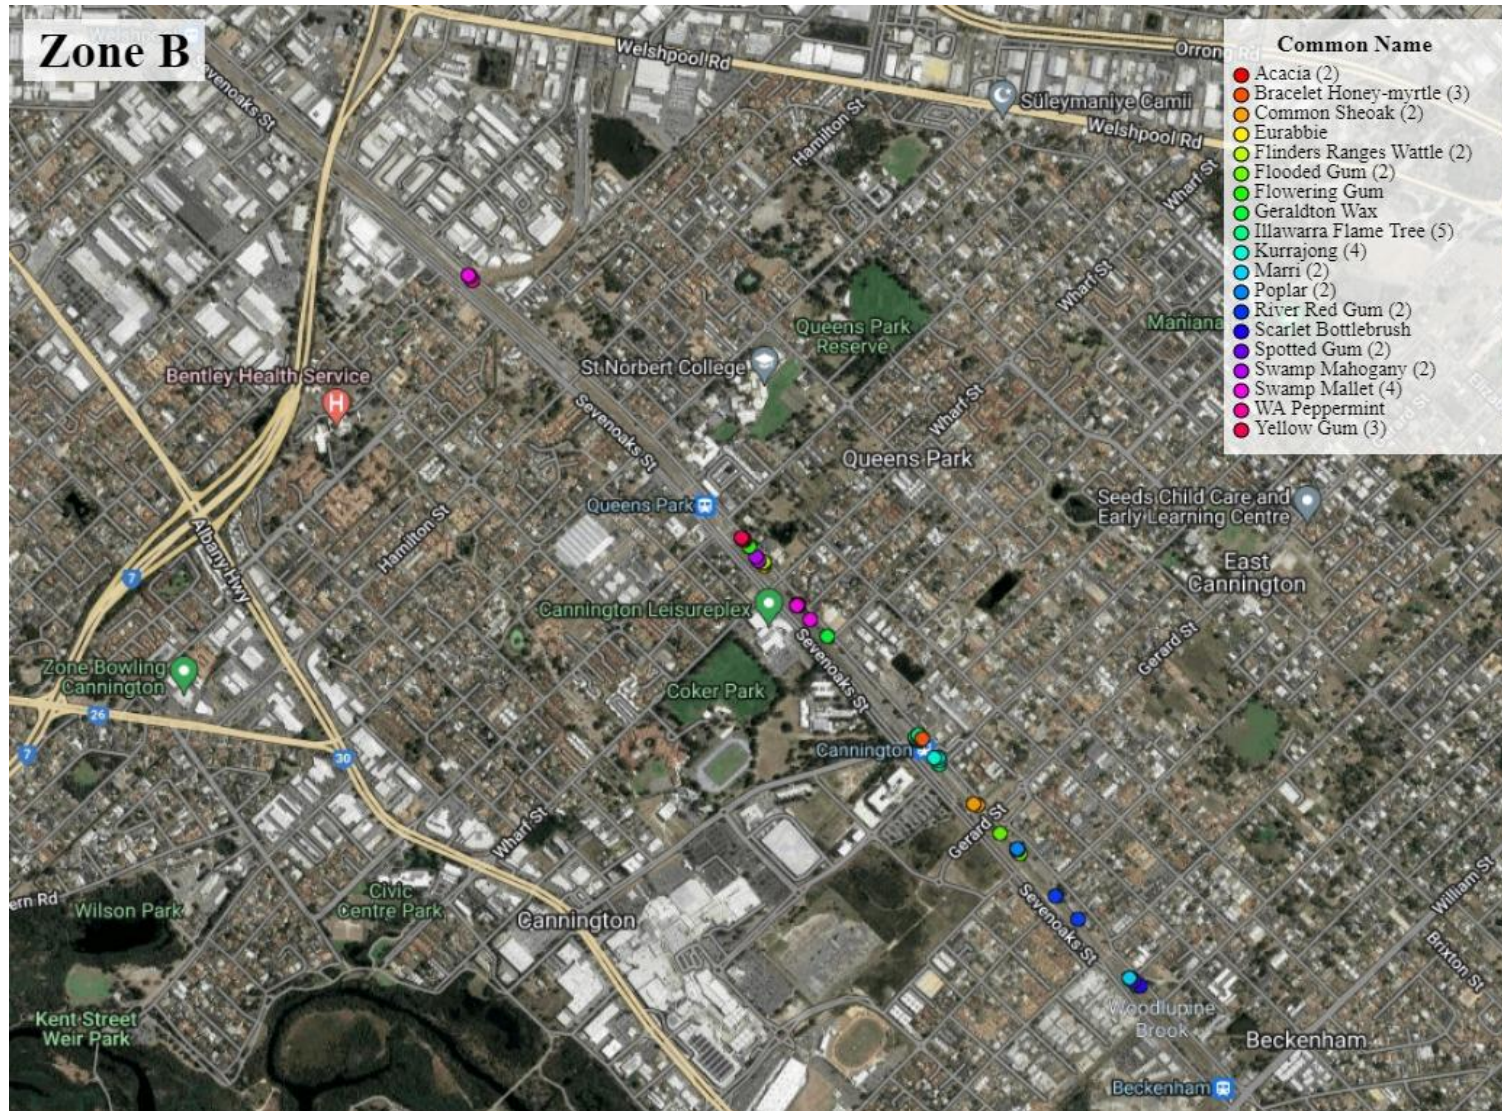

The purpose of this document is to provide tree protection advice that will be applicable for the duration of the Armadale Line upgrade project and should be referred to in the event of works of any kind being undertaken near trees and grass trees

3.0 Discussion

Of the 1021 trees assessed from Lacey Street to Miller Street, the main works found to be required is pruning to remove deadwood over 25mm in diameter and lifting of the canopies. The majority of these trees have been backed by a fence line and the rail corridor. They have seemingly been left with low foliage for the purpose of screening the rail corridor and reducing noise.

Uplifting of these verge trees will assist with the overall vision of the creation of new public open spaces. It will improve sightlines through the area and improve passive surveillance, whilst removal of deadwood will reduce the level of enquiry from the public about concerns over the level of risk.

The level of risk across the surveyed tree population was found to be “Bradley Acceptable” in terms of where risk from trees is imposed upon others. In this regard there was not any significant pruning found to be required in order to reduce the level of risk from the surveyed trees.

Within Zone A there are 20 Jacarandas adjacent the current Bus Interchange area that are established specimens that would compliment a future open space.

Within Zone B, and also around the Cannington Train Station are 5 *Brachychiton acerifolius* and 4 *Brachychiton populneus* that are good specimens that are recommended to be retained in situ due to their good condition and aesthetic value. Tree 1 and 3 (Marri and Maculata) are good specimens that should ideally remain in situ, whereas tree 4 and 6 (Marri's) have been heavily pruned over a number of years to provide clearance to the OLE, with the removal of the OLE and a reduced pruning regime, they can be assisted with reforming their canopies.

Trees 8 and 11 (Flooded Gum) are large specimen that would provide food sources for birds and should remain in situ.

Zone C: At the Leach Highway end of Zone C, trees 1, 2, 3, 4, 5, 6, 8, 10, 15 and 17 are suffering from nutrient deficiencies and should be treated with 500 litres of water with Bioprime mixed at 1%, additionally the grass should be removed from around their trunks to a radius of 3m and replaced with mulch. These trees will need to be reinspected after 1 months and retreated every 6 weeks. In this section there are 5 Melaleuca that could be transplanted, the appropriate time requirements for root preparation and the cost need to be considered against the cost of buying advanced stock that can be brought to site and planted within a smaller period and with lower ongoing maintenance requirements.

Within Zone D there are 39 Cook Pines that are in good health and will continue to contribute to the amenity of the area as they are literally standout specimens due to their size, the removal of some smaller shrubs around these could be undertaken to highlight these even more. Tree 291 is a remnant Marri located adjacent to Oats Street Station, this tree will require full protection in line with the advice provided below during demolition and construction works.

4.0 Tree Protection and Excavation Methodology

The Australian standard for Protection of trees on development sites, AS 4970 – 2009, serves to set out protection measures for trees on construction sites during the period of construction and is comprised of two zones.

The first is the Tree Protection Zone (TPZ) (Diagram 1) which considers protection of the canopy and roots. In which it is ideal that no plant and equipment enter in order to prevent any damage to the canopy of the tree and damage to the roots through excavation works.

All design considerations should ideally allow for the TPZ in the first instance. Only falling to the second zone when absolutely necessary. With works taking place within the TPZ under the supervision of the Project Arborist.

The second is the Structural Root Zone (SRZ) which is ultimately a no dig zone for excavation works in instances where it is found that there is an absolute need to dig within the TPZ. Please note that the TPZ is inclusive of the SRZ measurement. Even when working outside of the TPZ, it is important that any excavation works conducted around these trees is done in a radial pattern and not across the root plate of the trees (Diagram 2).

Where soil removal is required to take place from the start of the TPZ up to the edge of the SRZ, this is best undertaken using vacuum extraction as it causes less damage to roots that might be present. This process can also be used to remove soil, allowing for replacement with a structural soil mix or landscape mix with improved water and nutrient holding capacity.

Mechanical equipment should ideally not be used to dig in the TPZ, as they tend to dig across a root plate and catch any roots in their path and pull against them. This action leads to damage further along the root and fracturing at the root crown where the root joins onto the base of the tree. This can lead to death of the root and decline or even death of the tree. If mechanical equipment is used, it should ideally only be for hard digging where absolutely necessary. This will require scraping radially along the surface to gradually expose roots, allowing them to be cut cleanly (Diagram 2). This reduces the possibility of significant damage occurring and will help to maintain the good condition of the trees into the future.

All staff and contractors undertaking any form of excavation would be required to follow this process and may only cut roots smaller than 50mm in diameter that are found outside of the TPZ. Any requirement to cut roots larger than this should be deferred to the Project Arborist for advice. Where pruning of roots is undertaken, this must be done using a sharp saw or bypass secateurs that have been cleaned with Methylated spirits or a 10% bleach solution before and after pruning. Roots are not to be torn, pulled, or cut with an axe.

The accompanying reports provides Tree Protection Zone (TPZ) and Structural Root Zone measurements (SRZ). Which are to be observed for all trees. With regards to grass trees a standard 2m TPZ should be implemented for all Grass trees regardless of their size.

Should any works need to be undertaken within the TPZ, it is recommended that the Project Arborist is consulted prior to works being undertaken in order to provide guidance. This is especially important for any form of soil movement and excavation.

Where any work is undertaken up to the TPZ area, it is important that this is still done in a considered manner after consultation with the Project Arborist.

5.0 Tree Protection Measures within the TPZ & SRZ

Within the Tree Protection Zones (TPZ) and Structural Root Zones (SRZ) for each tree, site workers and contractors are NOT to allow the following to occur.

- Mechanical excavation including trenching without consulting the site Arborist.
- Excavation for silt fencing.
- Cultivation.
- Storage.
- Preparation of chemicals, including preparation of cement products.
- Parking of vehicles and plant.
- Refuelling.
- Dumping of waste.
- Placement of fill.
- Lighting of fires.
- Soil level changes.
- Temporary or permanent installation of utilities and signs.
- Physical damage to the tree.

TPZ control measures

- Where practical, always trench outside the TPZ. Impacting more than 10% of the TPZ can affect the long-term health of the tree.
- Where it is not possible to work outside the TPZ and an encroachment of more than 10% is required the site Arborist must be contacted prior further works being completed.
- Within the TPZ, minimise the extent impacted and for significant encroachments, under bore/directional drill at least 600 mm beneath the ground surface, or if excavating, hand dig or use an air spade or vacuum excavation.
- Always where possible, establish and work outside the TPZ. Fence off the TPZ to avoid physical damage to trees.

6.1.1 INSTALLATION OF UNDERGROUND SERVICES WITHIN THE TPZ

All services should be routed outside the TPZ. If underground services must be routed within the TPZ, they should be installed by Horizontal directional drilling, the directional should be a minimum depth of 600 mm. With start and finish holes being placed outside of the TPZ

For manual excavation of trenches, the project arborist should advise on roots to be retained and should monitor the works. Manual excavation may include the use of pneumatic and hydraulic tools.

5.1.2 TREE PROTECTION FENCING

An exclusion zone should be established along the TPZ perimeters of retained trees and cordoned off with a physical barrier of ridged chain mesh fence, 1.8m in height, which is securely anchored. The role of these fences is to prevent any damage to the complete tree including root system (SRZ & TPZ), stem and branch structure as well as the crown or canopy.

The Project Arborist must be consulted at any time entry into a TPZ of the retained trees is required. No routing of services, parking of vehicles, stacking of materials, equipment etc. is to occur within the TPZ of retained tree/s, nor disposal of fuels, paints, chemicals, or any other waste product is to occur within the protected TPZ area. Nor any other activity which could otherwise cause injury and/or adversely affect the health of a retained tree.

5.1.3 ACTIVITY OUTSIDE THE TREE PROTECTION ZONE (TPZ)

Planning of site operations should take sufficient account of wide loads, tall loads and plant with booms, jibs, and counterweights (including piling rigs), in order that they can operate without coming into contact with retained trees. Such contact can result in serious damage to the trees and might make their safe retention impossible. Consequently, any transit or traverse of plant in proximity to trees should be conducted under supervision/spotter, to ensure that adequate clearance from trees is maintained at all times.

Additional precautions outside the exclusion zone - Materials whose accidental spillage would cause damage to a tree should be stored and handled well away from the outer edge of its TPZ.

5.1.4 AVOIDING PHYSICAL DAMAGE TO ROOTS

To avoid damage to tree roots, existing ground levels should be retained within the TPZ. Intrusion into soil (other than for piling) within the TPZ is generally not acceptable, and topsoil within it should be retained in situ. However, limited manual excavation within the TPZ might be acceptable, subject to justification. Such excavation should be undertaken carefully, using hand-held tools and preferably by compressed air soil displacement or vacuum excavation.

Roots, whilst exposed, should immediately be wrapped, or covered to prevent desiccation and to protect them from rapid temperature changes. Any wrapping should be removed prior to backfilling, which should take place as soon as possible, roots should not be exposed for any more than 8hrs exposure.

Roots smaller than 50 mm diameter may be pruned back, making a clean cut with a suitable sharp tool (e.g., secateurs or handsaw), except where they occur in clumps. Roots occurring in clumps or greater than 50mm diameter over may be able to be severed only following

consultation with the project Arborist, as these roots might be essential to the tree's health and stability.

Prior to backfilling, retained roots should be surrounded with topsoil or uncompacted sharp sand (builders' sand should not be used because of its high salt content, which is toxic to tree roots), or other loose inert granular fill, before soil or other suitable material is replaced. This material should be free of contaminants and other foreign objects potentially injurious to tree roots.

5.1.5 Soil and base materials

New soil used to raise existing soil levels should have a low clay content, the Richgro Native soil mix is recommended as it uses a large grain sand that maintains large open pore spaces, which is ideal for reduced compaction and allows air and water to enter.

Application of the new soil should be done to ensure that it covers any fibrous roots but should not be placed within 300mm of the trunk, and not be applied to a thickness greater than 100mm above the existing soil level.

Any new soil or base materials used for construction purposes, such as crushed limestone, brickies sand, or gravels, which will be placed on the site must be certified pathogen free. This is to ensure that pest, disease, or fungi are not transported to the site and infect the trees.

5.1.6 Mulch

Any mulch used should also be certified pathogen free.

A basic woodchip mulch is best over other processed mulches, however, due to the nature of the development, Pine bark is recommended for use. This is due to its aesthetic appeal, ease of maintenance and ability to remain open, uncompacted and highly porous.

It is important to avoid highly processed landscape mulches that have fine particles, as they tend to become very compacted and form a hardpan layer over the summer period, which prevents the free movement of oxygen and water infiltration come winter.

It is preferable that mulch zones be created around all trees over the placement of lawn.

Lawn competes with trees to the point that they can gather nutrients and water in the top layers of soil before it can filter to the tree's roots below. Also, lawn encourages foot traffic, which, in turn, leads to compaction over root plates. Whereas mulch discourages people from walking across an area. The SRZ measurement are a good guide for the size of the mulch zone for a tree.

5.1.7 Supplemental watering, liquid fertilising, and irrigation

For the duration of construction, where any excavation is being undertaken within the TPZ of any tree, it should be provided with supplemental water. This can be achieved with an application by a water truck and the process can be sped up, by installing temporary poly systems, using multiple bubblers, 2 bubblers for a small tree (up to 5m) 4 for a medium size tree (5 to 15. and 6 to 10 for large trees (15m+)

The adjacent chart should be followed.

A treatment of 500 litres of water with Bioprime trace combined with Bailey's liquid Grosorb (Mix rate 10%) should be undertaken on trees 1, 2, 3, 4, 5, 6, 8, 10, 15 and 17 prior to construction beginning to help with nutrient deficiencies that have been observed. This would then need to be repeated every 6 weeks during the period of construction and for one summer after completion.

Permanent irrigation will be highly beneficial for the long-term health and appearance of the trees, especially new plantings, as it will assist greatly in encouraging the trees to increase density in their canopies and improve their appearance.

Watering Regime for Small Trees		
Time period	Volume	Frequency
15 Oct to 1 May	100 L	every second day
2 May to 1 July	75 L	every second day
2 July to 15 Sept	50 L	every third day - do not water on days of heavy rain fall
16 Sept to 15 Oct	75	Every second day

Watering Regime for Medium Trees		
Time period	Volume	Frequency
15 Oct to 1 May	200 L	every second day
2 May to 1 July	100 L	every second day
2 July to 15 Sept	50 L	every third day - do not water on days of heavy rain fall
16 Sept to 15 Oct	150	Every second day

Watering Regime for Large Trees		
Time period	Volume	Frequency
15 Oct to 1 May	400 L	every second day
2 May to 1 July	200 L	every second day
2 July to 15 Sept	100 L	every second day - do not water on days of heavy rain fall
16 Sept to 15 Oct	250	Every second day

5.1.8 Hardstand areas

It would be advantageous for the long-term health of all trees (even those yet to be planted) if a permeable material were used for all footpaths and car parking areas. Permeable materials would allow water and oxygen to enter the soil assisting with root growth and overall tree health.

Midland Brick, for instance, produce an aesthetic, highly effective permeable range of pavers, with low maintenance requirements that suit many applications. Alternatively, there are permeable asphalts and concretes. Permeable surfaces will also assist with water capture into the ground water table.

In addition to using a permeable or semi permeable hardstand, structural soil or root cells can be installed beneath these areas to form open root zone. The following methodology, then acts as a workable base for laying paving or other surfaces.

Structural Soil

Structural soils are effectively a landscape mix that contain, binding agents and very large aggregate materials which take load and compaction, whilst maintaining large spaces between them and prevent the soil media from becoming compacted.

On top of either structural soils or strata cells. two topping layers of finer gravel are used to support the paving. The first is a 10mm washed gravel that is laid 50mm thick over the structural soil or cells. The second and final layer is a 3 to 5mm washed gravel, also 50mm deep, this layer can be compacted and screeded which allows the paving to be laid directly onto it.

It is imperative that sand is not added to any of these layers, as it will clog the open spaces between the gravel and cause compaction. This will prevent the system from working properly.

Each layer of gravel will maintain open pore spaces due to its angular nature. This will then provide uncompacted, aerated soil for root growth and reduce upward root growth by roots that are normally searching for oxygen, as they will be able to freely move downwards into the root cells or structural soil and not upwards because of the higher oxygen content lower down in the soil profile.

This photo shows the good quality of root growth in structural soils

Root/Strata Cells

Root cells are effectively open plastic cubes or rectangle boxed that are load bearing and are installed below ground level to support a hard trafficable surface above. The cells are filled with a soil media that does not become compacted and conduits for services can be laid through them.

A Tree being planted with root cells around it, the pavement is then installed around the tree, over the cells

Raised walkways can also be considered, as they leave open soil that can absorb oxygen and water.

Where structural soils and or root cells are used in combination with permeable surfaces, this has been proven to provide for larger healthier trees that are longer lived with a low risk of harm, additionally, these methods lead to less root disturbance to infrastructure over the life of the tree.

All hardstand areas should have a 1% fall towards garden beds and tree pits to utilise rainwater run off to a greater extent.

A diagram with root cells, a tree and conduits installed

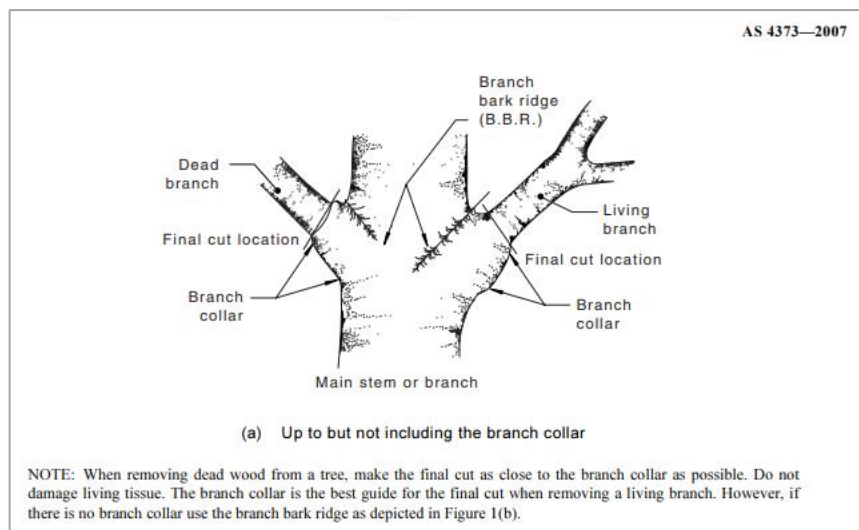

5.1.9 Pruning

Where the pruning of any tree is undertaken, this must be performed by an AQF level 3 Arborist. Unqualified persons must not prune any part of a tree, nor should they rip or tear any part of a tree.

The Arborist must use sharp and appropriately maintained pruning equipment that has been sterilised with either a 10% bleach solution or methylated spirits prior to starting work on any tree. This includes multiple trees, where sterilisation should take place between each tree. The sterilisation of pruning equipment is especially important to prevent the spread of diseases such as *Quambalaria coreycup* between the *Eucalyptus* and *Corymbia*' s.

All pruning must be undertaken in accordance with the Australian Standard of Amenity Pruning (AS4373 – 2007) (Branch pruning diagram exert shown to the right)

Pruning is best undertaken in the spring months, when sap flow and general tree growth is active, pruning requirements other than the uplifting and deadwood removal already specified will need to be assessed as the design progresses.

5.1.10 Tree Removal

Where any tree is removed, this should be undertaken in a manner that prevents damage occurring to adjacent trees that are to remain in situ. Additionally, is the stump of a removed tree being within the TPZ of another remaining tree, stump grinding should only be undertaken to reduce the stump to no more than 50mm below ground level, this is to prevent damage to the remaining tree's root systems.

5.1.11 Site Induction

The purpose of the Tree Protection Zone should be included in the Site Induction for all ALUA sites. This is to ensure that all staff and contractors are aware of the purpose of the zone, fencing and are aware of the rules around this zone.

5.1.12 Site Inspection (By Project Arborist)

It is most ideal that given consideration for the level of work that will be undertaken across this site, that a site inspection be undertaken at a minimum of once a month.

Consultation and additional site visits are to be scheduled where there are excavation works being undertaken within the TPZ of all tree species, but especially for the following species:

- *Araucaria columnaris*
- *Corymbia calophylla*
- *Corymbia ficifolia*
- *Eucalyptus maculata*
- *Eucalyptus camaldulensis*
- *Eucalyptus citriodora*
- *Eucalyptus marginata*
- *Eucalyptus rudis*
- *Xanthorrhoea sp*

5.1.13 Spotters for clearing

Spotters will be required when removing any of the following , low, dense, shrub species.

- *Chamelaucium uncinatum*
- *Adenanthos cygnorum*
- *Jacksonia fercillata*
- *Petrophile linearis*
- *Leptospermum laevigatum*

A spotter will also be required when removing or transplanting any Grass Trees

A list of locations of these species is provided as a separate appendix to this report and the accompanying Tree Survey Reports, in excel format.

6.0 Conclusion

There are many well established tree specimens that will significantly contribute towards the revitalised landscape and community spaces. The observation of excavation and care methodology in this document will ensure that these trees continue to contribute to the streetscape and ecological environment for a number of years to come.

A crucial element of tree protection for this project will be minimising the extent that plant and equipment travel over the root zones of trees, where this can be minimised, or more importantly, excluded, this will prevent soil compaction over root zones. Soil compaction is a major cause in tree decline, as it excludes important oxygen from the soil that contributes to healthy tree growth. The other main issue experienced in construction project are strikes to trees from ground-based plant and strikes from lifting equipment, which often break branches.

The creation of tree protection zones is essential in preventing all of these issues that have long term impacts to tree health.

It is encouraged that all trees are maintained in situ and minimal removals are undertaken, as established trees make a considerable impact upon an area, where it takes many years to achieve a similar feel and ambience from newly planted stock. It is however recommended to remove the masses of Chamelaucium and Leptospermum (Geraldton Wax and Victorian Tea Tree) that line the rail corridor, as this is exclusive to other plant species, harbours rubbish and creates areas that enable undesirable activities.

7.0 Recommendations

- Tree Protection fencing should be erected around all trees to be retained.
- All construction work within the TPZ of any retained tree should always be authorised & supervised by the site Arborist.
- Any demolition and excavation must be undertaken in line with the methodology described in section 4.0
- Addition of new soil and replanting must be conducted with due care. There shall be no use of strip style excavation adjacent to or within the TPZ of any retained tree, e.g., for removal of topsoil, installation of boundary fencing, future foundations, installation of services, kerb/roadside guttering etc.
- It is imperative that TPZ fencing protection measures are installed for the protection of all retained trees prior to the commencement of the future construction phase, and that it remains in situ for the duration and until completion of proposed construction works.
- TPZ fencing and other measures must be fixed so that they cannot be moved either by accidental physical impact or other inadvertent means. There should be no entry within any TPZ by any construction crew or other persons during the construction phase without authorisation and/or attendance of the site Arborist.
- Watering of trees is to occur where excavation takes place within their TPZ, or immediately on the edge of the TPZ, in line with the watering table in section 5.1.7 and is to continue for at least one summer after construction is complete.

8.0 Glossary of Arboricultural Terminology

Abscission - The shedding of a leaf or other short-lived part of a woody plant, involving the formation of a corky layer across its base; in some tree species twigs can be shed in this way.

Abiotic - Pertaining to non-living agents, e.g., environmental factors.

Absorptive roots - non-woody, short-lived roots, generally having a diameter of less than one millimetre, the primary function of which is uptake of water and nutrients.

Adaptive growth - In tree biomechanics, the process whereby the rate of wood formation in the cambial zone, as well as wood quality, responds to gravity and other forces acting on the cambium. This helps to maintain a uniform distribution of mechanical stress.

Adaptive roots - The adaptive growth of existing roots; or the production of new roots in response to damage, decay or altered mechanical loading.

Adventitious shoots - Shoots that develop other than from apical, axillary, or dormant buds; see also 'epicormic'

Anchorage - The system whereby a tree is fixed within the soil, involving cohesion between roots and soil and the development of a branched system of roots which withstands wind and gravitational forces transmitted from the aerial parts of the tree.

Axil - The place where a bud is borne between a leaf and its parent shoot.

Bacteria - Microscopic single-celled organisms, many species of which break down dead organic matter, and some of which cause diseases in other organisms.

Bark - A term usually applied to all the tissues of a woody plant lying outside the vascular cambium, thus including the phloem, cortex, and periderm; occasionally applied only to the periderm or the phellem.

Basidiomycotina (Basidiomycetes) - One of the major taxonomic groups of fungi.

Bolling - A term sometimes used to describe pollard heads.

Bottle-butt - A broadening of the stem base and buttresses of a tree, in excess of normal and sometimes denoting a growth response to weakening in that region, especially due to decay.

Bracing - The use of rods or cables to restrain the movement between parts of a tree.

Branch:

- **Primary** - A first order branch arising from a trunk or stem
- **Lateral** - A second order branch, subordinate to a primary branch
- **Sub-lateral** - A third order branch, originating from lateral branch

Branch bark ridge - The raised arc of bark tissues that forms within the acute angle between a branch and its parent stem.

Branch-collar - A visible swelling formed at the base of a branch.

Brown-rot - A type of wood decay in which cellulose is degraded, while lignin is only modified.

Buckling - An irreversible deformation of a structure subjected to a bending load.

Buttress zone - The region at the base of a tree where the major lateral roots join the stem, with buttress-like formations on the upper side of the junctions.

Cambium - Layer of dividing cells producing xylem (woody) tissue internally and phloem (bark) tissue externally.

Canker - A persistent lesion formed by the death of bark and cambium due to colonisation by fungi or bacteria.

Canopy species - Tree species that mature to form a closed forest canopy.

Cleaning out - The removal of dead, crossing, weak, and damaged branches, where this will not damage or spoil the overall appearance of the tree.

Compartmentalisation - The chemical confinement of disease, decay, or other dysfunction within a tree's tissue, due to passive and/or active defences operating at the boundaries of the affected region.

Compression fork - An acute angled fork that is mechanically optimised for the growth pressure that two or more adjacent stems exert on each other.

Compression strength - The ability of a material or structure to resist failure when subjected to compressive loading, measurable in trees with special drilling devices.

Compressive loading - Mechanical loading which exerts a positive pressure, the opposite to tensile loading.

Tree Protection Zone - Area from which access is prohibited for the duration of the project to prevent damage to a tree.

Crown/Canopy - The main foliage bearing section of the tree.

Crown lifting - The removal of limbs and small branches to a specified height above ground level.

Crown thinning - The removal of a proportion of secondary branch growth throughout the crown to produce an even density of foliage around a well-balanced branch structure.

Crown reduction/shaping - A specified reduction in crown size whilst preserving, as far as possible, the natural tree shape.

Crown reduction/thinning - Reduction of the canopy volume by thinning to remove selected branches whilst preserving the natural tree shape.

Deadwood - Branch or stem wood bearing no live tissues.

Decurrent - A system of branching in which the crown is borne on a number of major widely spreading limbs of similar size.

Defect - In relation to tree hazards, any feature of a tree which detracts from the uniform distribution of mechanical stress, or which makes the tree mechanically unsuited to its environment.

Delamination - The separation of wood layers along their length, visible as longitudinal splitting.

Dieback - The death of parts of a woody plant, starting at shoot-tips or root-tips.

Disease - A malfunction in or destruction of tissues within a living organism, usually excluding mechanical damage; in trees, usually caused pathogens.

Distal - In the direction away from the main body of a tree or subject organism (cf. proximal)

Dominance - In trees, the tendency for a leading shoot to grow faster or more vigorously than the lateral shoots; also, the tendency of a tree to maintain a taller crown than its neighbours.

Dormant bud - An axial bud which does not develop into a shoot until after the formation of two or more annual wood increments; many such buds persist through the life of a tree and develop only if stimulated to do so.

Dysfunction - In woody tissues, the loss of physiological function, especially water conduction, in sapwood.

DBH (Diameter at Breast Height) - Stem diameter measured at a height of 1.4 metres or the nearest measurable point. Where measurement at a height of 1.4 metres is not possible, another height may be specified.

Endophytes - Micro-organisms that live inside plant tissues without causing overt disease, but in some cases capable of causing disease if the tissues become physiologically stressed.

Epicormic shoot - A shoot having developed from a dormant or adventitious bud and not having developed from a first-year shoot.

Excrecence - Any abnormal outgrowth on the surface of tree or other organism.

Excurrent - In trees, a system of branching in which there is a well-defined central main stem, bearing branches which are limited in their length, diameter, and secondary branching (cf. decurrent).

Fastigate - Having upright, often clustered branches.

Flush cut - A pruning cut which removes part of the branch bark ridge and or branch-collar.

Girdling root - A root which circles and constricts the stem or roots possibly causing death of phloem and/or cambial tissue.

Habit - The overall growth characteristics, shape of the tree and branch structure.

Haloing - Removing or pruning trees from around the crown of another (usually mature or post-mature) tree to prevent it becoming suppressed.

Hazard beam - An upwardly curved part of a tree in which strong internal stresses may occur without being reduced by adaptive growth, prone to longitudinal splitting.

Heartwood/false-heartwood - The dead central wood that has become dysfunctional as part of the aging processes and being distinct from the sapwood.

Heave - The lifting of pavements and other structures by root diameter expansion; also, the lifting of one side of a wind-rocked root-plate.

High canopy tree species - Tree species having potential to contribute to the closed canopy of a mature forest.

Incipient failure - In wood tissues, a mechanical failure which results only in deformation or cracking, and not in the fall or detachment of the affected part.

Included bark (ingrown bark) - Bark of adjacent parts of a tree (usually forks, acutely joined branches or basal flutes) which is in face-to-face contact.

Infection - The establishment of a parasitic micro-organism in the tissues of a tree or other organism.

Internode - The part of a stem between two nodes; not to be confused with a length of stem which bear nodes but no branches.

Lever arm - A mechanical term denoting the length of the lever represented by a structure that is free to move at one end, such as a tree or individual branch.

Lignin - The hard, cement-like constituent of wood cells; deposition of lignin within the matrix of cellulose microfibrils in the cell wall is termed Lignification.

Lions tailing - When a branch of a tree that has few if any side branches except at its end and is thus liable to snap due to end-loading.

Loading - A mechanical term describing the force acting on a structure from a particular source, e.g., the weight of the structure itself or wind pressure.

Longitudinal - Along the length (of a stem, root, or branch).

Lopping - A term often used to describe the removal of large branches from a tree, but also used to describe other forms of cutting

Minor deadwood - Deadwood of a diameter less than 25mm and or unlikely to cause significant harm or damage upon impact with a target.

Mulch - Material laid down over the rooting area of plants to help conserve moisture; mulch may consist of organic matter, or artificial material.

Mycelium - The body of a fungus, consisting of branched filaments (hyphae).

Occlusion - The process whereby a wound is progressively closed by the formation of new wood and bark around it.

Pathogen - A micro-organism which causes disease in another organism.

Photosynthesis - The process whereby plants use light energy to split hydrogen from water molecules and combine it with carbon dioxide to form the molecular building blocks for synthesizing carbohydrates and other biochemical products.

Phytotoxic - Toxic to plants.

Pollarding - The removal of the tree canopy, back to the stem or primary branches, usually to a point just outside that of the previous cutting.

Primary branch - A major branch, generally having a basal diameter greater than 0.25 x stem diameter.

Probability - A statistical measure of the likelihood that a particular event might occur.

Pruning - The removal or cutting back tree parts to growth points.

Rams-horn - In connection with wounds on trees, a roll of occluding tissues which has a spiral structure as seen in cross section.

Reactive Growth/Reaction Wood - Production of woody tissue in response to altered mechanical or external loading.

Residual wall - The amount of non-decayed wood remaining following decay of internal wood

Rib - A ridge of wood that has usually developed because of locally increased mechanical loading. Often associated with internal cracking in the wood of the stem, branch, or root.

Ringbarking (girdling) - The removal of a ring of bark and phloem around the circumference of a stem or branch, normally resulting in an inability to transport photosynthetic assimilates above or below the area of damage.

Ripewood - The older central wood of those tree species in which sapwood gradually ages without being converted to heartwood.

Root-collar - The transitional area between the stem/s and roots.

Root zone - Area of soils containing absorptive roots of the tree/s described. The Primary root zone is that which we consider of primary importance to the physiological well-being of the tree.

Sapwood - Living xylem tissues.

Selective delignification - A kind of wood decay (white-rot) in which lignin is degraded faster than cellulose.

Shedding - In woody plants, the normal abscission, rotting off or sloughing of leaves, floral parts, twigs, fine roots, and bark scales.

Shrub species - Woody perennial species forming the lowest level of woody plants in a forest or garden and not normally considered to be trees.

Simultaneous white rot - A kind of wood decay in which lignin and cellulose are degraded at about the same rate.

Soft-rot - A kind of wood decay in which a fungus degrades cellulose within the cells,

Spores - Propagules of fungi; most spores are microscopic and dispersed in air or water.

Sporophore - The spore bearing structure of fungi.

Stem/s - Principle above-ground structural component(s) of a tree that supports its branches.

Stress - In plant physiology, a condition under which one or more physiological functions are not operating within their optimum range, for example due to lack of water, inadequate nutrition, or extremes of temperature: In mechanics, the application of an external force to an object.

Stringy white-rot - The kind of wood decay produced by selective delignification.

Structural roots - Roots, generally having a diameter greater than 50 millimetres, and contributing significantly to the structural support and stability of the tree.

Structural root zone (ZRZ) - The zone of the root plate most likely to contain roots that are critical for anchorage and the stability of the tree.

Subsidence - In relation to soil or structures resting in or on soil, a sinking due to shrinkage when certain types of clay soil dry out, sometimes due to extraction of moisture by tree roots.

Subsidence - In relation to branches of trees, a term that can be used to describe a progressive downward bending due to increasing weight.

Taper - In stems and branches, the degree of change in girth along a given length.

Targets - In tree risk assessment persons or property or other things of value which might be harmed or damaged by falling parts of a tree

Topping/ Lopping - In arboriculture, the removal of the crown of a tree, or of a major proportion of it.

Torsional stress - Mechanical stress applied by a twisting force.

Translocation - Plant physiology, the movement of water and dissolved materials through the body of the plant.

Transpiration - The evaporation of moisture from the surface of a plant, especially via the stomata of leaves; it exerts a suction which draws water up from the roots and through the intervening xylem cells.

Tree Protection Zone (TRZ) - This is an area left around a tree to ensure protection of the above and below ground parts of the tree during construction works. It will usually include the SRZ and is usually recommended to be fenced off for the period of the works.

Understorey - This layer consists of younger individuals of the dominant trees, together with smaller trees and shrubs which are adapted to grow under lower light conditions.

Understorey tree species - Tree species not having potential to attain a size at which they can contribute to the closed high canopy of a forest or garden.

Vascular wilt - A type of plant disease in which water-conducting cells become dysfunctional.

Vessels - Water-conducting cells in plants, usually wide and long for hydraulic efficiency; generally, not present in coniferous trees.

Vigour - The expression of carbohydrate expenditure to growth (in trees).

Vitality - A measure of physiological condition.

White-rot - A range of kinds of wood decay in which lignin, usually together with cellulose and other wood constituents, is degraded.

Wind exposure - The degree to which a tree or other object is exposed to wind, both in terms of duration and velocity.

Windthrow - The blowing over of a tree at its roots.

Woundwood - Wood with atypical anatomical features, formed in the vicinity of a wound.

9.0 Appendices

9.1 QTRA Risk Thresholds

QTRA Advisory Risk Thresholds		
Threshold	Description	Action
1/1.	UNACCEPTABLE Risks will not ordinarily be tolerated	<ul style="list-style-type: none"> • Control the risk
1/1000	Unacceptable (where imposed on others) Risks will not ordinarily be tolerated	<ul style="list-style-type: none"> • Control the risk • Review the risk
	Tolerable (by agreement) Risks may be tolerated if those exposed to the risk accept it, or the tree has exceptional value	<ul style="list-style-type: none"> • Control the risk unless there is broad stakeholder agreement to tolerate it, or the tree has exceptional value • Review the risk
1/10,000	Tolerable (where imposed on others) Risks are tolerable if ALARP	<ul style="list-style-type: none"> • Assess costs and benefits of risk control • Control the risk only where a significant benefit might be achieved at reasonable cost • Review the risk
1/1,000,000	Broadly Acceptable Risk is already ALARP	<ul style="list-style-type: none"> • No action currently required • Review the risk

11.0 Disclaimer and Limitations

- a. References in this report to the "Consultant" means listed on the cover page as an employee of Westworks Consultancy. References in this report to Westworks Consultancy means Westworks Group Pty Ltd as trustee for Ussheridan Trust trading as Westworks Consultancy (ACN 156 131 010 ABN 46 156 131 010).
- b. In this report a reference to a group of persons includes a reference to all of them collectively, any two or more collectively and each of them individually.
- c. The releases and limitations in this report apply to the Arborist, Westworks Consultancy and any employees, directors, contractors, and agents of the Arborist and/or Westworks Consultancy.
- d. This report only covers identifiable defects present at the time of inspection. The Arborist and Westworks Consultancy accept no responsibility and cannot be held liable for any structural defect or unforeseen event/situation that may occur after the time of inspection.
- e. The Arborist and Westworks Consultancy cannot and do not guarantee trees contained within this report will be structurally sound under all circumstances and cannot and do not guarantee that the recommendations made will categorically result in the tree being made "safe." Unless specifically mentioned this report will only be concerned with above ground inspections, that will be undertaken visually from ground level.
- f. Trees are living organisms and as such cannot be classified as "safe" under any circumstances.
- g. Failure events can occur for any number of reasons at any time and cannot always reasonably be foreseen, as any number of circumstances can come about at any time before or after an inspection that the Arborist and Westworks Consultancy may not be aware of.
- h. All recommendations are made based on what can be reasonably identified at the time of inspection therefore the author accepts no liability for any recommendations made.
- i. Care has been taken to obtain all information from reliable sources. All data has been verified or as much as possible; however, the Arborist and Westworks Consultancy can neither guarantee nor be responsible for the accuracy of information provided by others.
- j. Booking of re-assessment after the prescribed period is the responsibility of the land manager/owner only. The Arborist and Westworks Consultancy are not responsible for providing reminders or notification that re assessment may be due and will not be held responsible to reinspect the listed trees until requested.
- k. The Arborist and Westworks Consultancy make no express warranties under this report.
- l. Except as the report specifically states, or as contained in any express warranty provided in relation to any goods or services provided or to be provided, the report does not include by implication any other term, condition, or warranty in respect of the quality, merchantability, acceptability, fitness for purpose, condition, description, assembly, manufacture, design or performance of the goods or services or any contractual remedy for their failure.
- m. If the client is a consumer nothing in the Report restricts, limits, or modifies the client's rights or remedies against Westworks Consultancy for failure of a statutory guarantee under the ACL save to the extent lawfully permissible.
- n. To the greatest extent permitted under law the Arborist and Westworks Consultancy are not liable to the client or any third party in any way under or in connection with the Report or in connection with the goods or services provided by them to the client or any third party.
- o. To the greatest extent permitted under law the Arborist and Westworks Consultancy are not liable for any indirect or consequential losses or expenses suffered by the client or any third party, howsoever caused, including but not limited to loss of turnover, profits, business or goodwill or any liability to any other party.
- p. The client expressly acknowledges and agrees that:
 - i. it has not relied upon, any service involving skill and judgement, or on any advice, recommendation, information, or assistance given by the Arborist or Westworks Consultancy, their agents, contractors, or employees in relation to any goods or services or their use or purpose.
 - ii. it has not made known, whether expressly or by implication, to the Arborist and Westworks Consultancy any purpose for which it requires the goods or services and it has the sole responsibility of satisfying itself that any goods or services as suitable for the use of the client.
 - iii. nothing in this Report is to be interpreted as excluding, restricting, or modifying the application of any non-excludable State or Federal legislation applicable to the sale of goods or supply of service.
 - iv. Any reinspection is the responsibility of the tree owner to arrange as required.
