

Custom Software to Manage
Asset Integrity Smarter

Capabilities

- Providing custom software solution to help Asset Owners, Maintainers and Inspectors better track, manage and remediate slow-moving Asset Integrity defects
- Ensures that defects are tracked through their entire lifecycle from identification, monitoring, remediation and close out
- Drives efficiency and accountability for contracting partners. Time saving when handling thousands of discrete defects
- Real time visibility of risk, work in progress and quality management

Discriminators

- Solution developed within the asset-intensive, mining jurisdiction of the Pilbara
- Extensive on-the-ground testing ensures software is intuitive, easy to use and preferred tool for contractors
- Solution is suitable to defence related assets such as wharves and other infrastructure
- Track record of over 10,000 tasks completed as well as over 100,000+ photos and attachments uploaded. Used by two tier-1 mining companies for a number of years
