

# Wedgetail Aerospace Pty Ltd

## Company Overview

Wedgetail Aerospace is an agnostic drone service provider focused on data acquisition and air freight. We are committed to providing our clients with innovative solutions that optimise their operations, increase efficiency and generate new value through the integration of drones and our world class capabilities/solutions.

Our team of specialist operators have thousands of hours experience covering all categories of drones. By partnering with Wedgetail Aerospace our customers get access to the very best pilots, cutting-edge technologies and tools to deliver high-quality results that meet their unique needs and requirements.

## Products

- Long-range and complex Beyond Visual Line of Sight (BVLOS) drone operations to conduct intelligence, surveillance, reconnaissance, survey and/or air freight over the land and maritime environment
- Test and evaluation of drones to determine what platform and systems can best service your requirements
- Integration, test and evaluation of sensors and payloads to determine what systems can best service your requirements
- Drone training to achieve Civil Aviation Safety Authority (CASA) Licenses and enable you to conduct real world operations

## Availability and Support

- We have In Principle Approvals From the Australian Government Defence Export Controls to provide our products and services to a range of organisations within Indonesia, Asia, the Pacific and the Middle East
- We have the regulatory approvals, staff, facilities and drone operating areas ready to conduct training of your pilots and maintainers and/or test and evaluations of your drones, sensors and payloads now
- We have a mobile remote operations capability to support remote drone operations ready for deployment now

## Discriminators

- Best in class pilots, maintainers, communications architects and engineers with thousands of hours of crewed and uncrewed aviation experience
- A ready to go mobile operations centre that enables rapid deployment to conduct operations in remote areas
- Access to expansive training and development areas in uncontrolled airspace that enables training of pilots, test and evaluation of drones, sensors and payloads and development of complex and long-range mission profiles
- The skill and experience required to realise the regulatory approvals required to conduct complex and long-range drone operations
- The only approval in Australia to operate drones >150kg takeoff weight
- The ability to source financing and insurance for your drones, sensors and payloads
- We have approvals for from the Civil Aviation Safety Authority to conduct drone operations for multi-rotor, fixed wing, powered lift and helicopter drones, by day, night and beyond visual line of sight
- We are a Civil Aviation Safety Authority approved Training Organisation that can issue licenses for drone pilots
