

# Perth and Peel

## Rainfall, streamflow and groundwater

### Rainfall

#### Gingin Brook

The graph shows how the total amount of rainfall, or streamflow in a particular place compares to previous years – specifically to the period from 1975 to last year. The graph also shows the potential rainfall or streamflow for the rest of the year based on a few scenarios.

Rainfall at Gingin is currently tracking in the above average category and is higher than the previous year.

# Streamflow

## Gingin Brook

The graph shows how the total amount of rainfall, or streamflow in a particular place compares to previous years – specifically, to the period from 1975 to last year. The graph also shows the potential rainfall or streamflow for the rest of the year based on a few scenarios.

Streamflow in Gingin Brook at Gingin is tracking below average, but is higher than the previous year.

# Groundwater

## Gingin

Groundwater levels at the representative bore in Gingin are tracking well below average and are higher than groundwater levels recorded in the previous year.

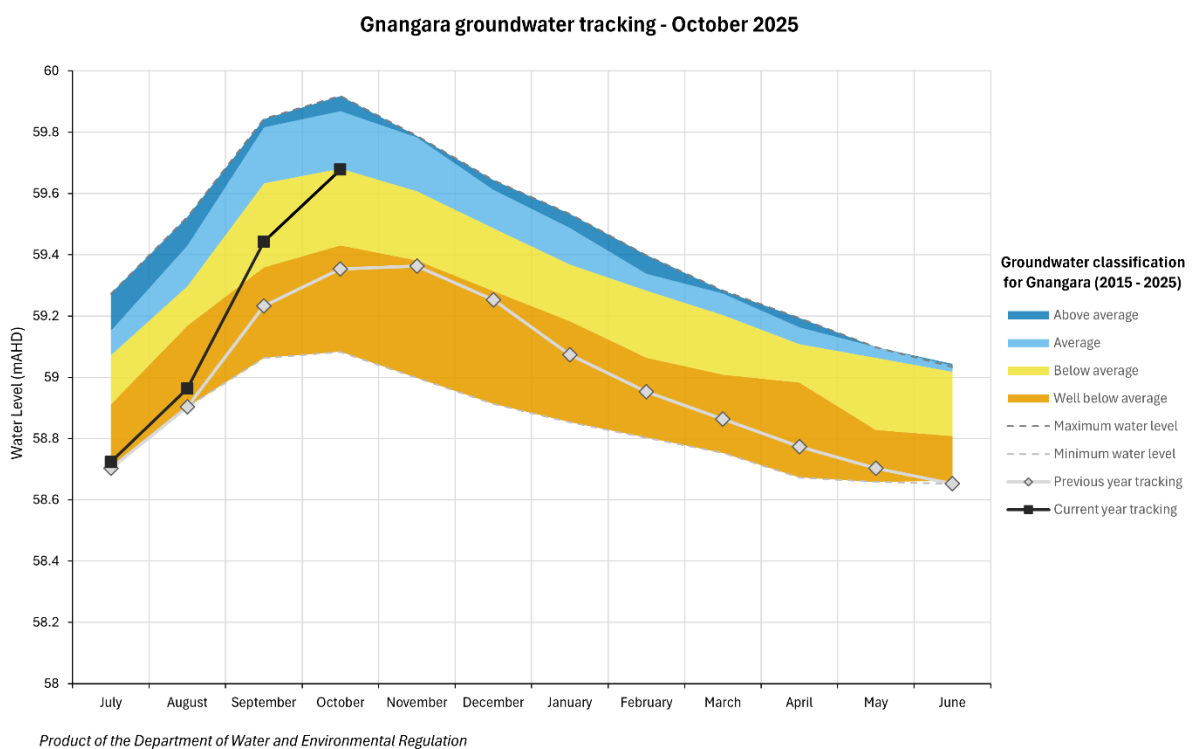

The [Gingin groundwater and surface water allocation plans: 2024 evaluation statement](#) includes updated management arrangements to help prevent further declines in groundwater levels associated with climate change and abstraction.

## Gnangara

Groundwater levels for June at the representative bore in Gnangara are tracking below average and are higher than groundwater levels recorded in the previous year.

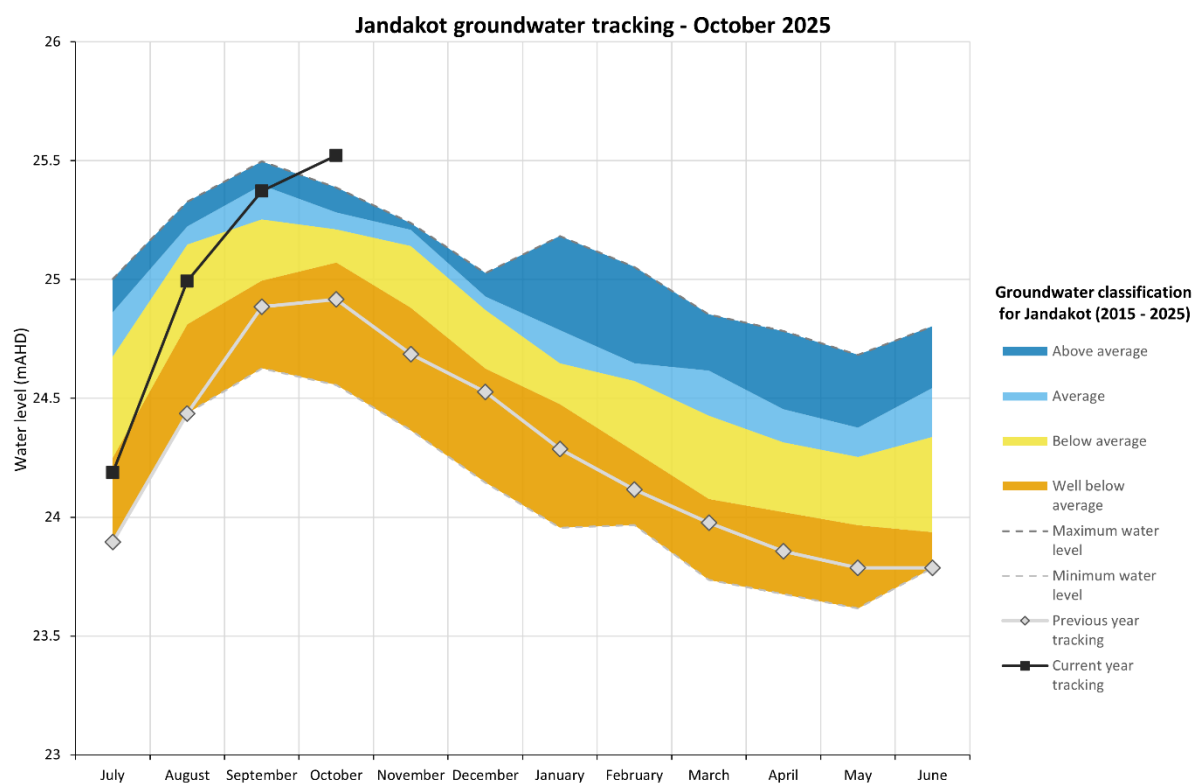

The 2022 [Gnangara groundwater allocation plan](#) sets out how we will manage the Gnangara groundwater system – Perth’s largest natural water resource – to continue adapting to climate change and to rebalance the system by 2032 by reducing groundwater abstraction by 54 GL/year.

## Jandakot

Groundwater levels at the representative bore in Jandakot are tracking well above average and are the highest they have been since 2015.

Under [Kep Katitjin – Gabi Kaadadjan Waterwise action plan 3](#), we are reviewing groundwater allocation limits in this area to manage groundwater for its sustainable use in the context of climate change.

## Mandurah

Groundwater levels at the representative bore in Mandurah are tracking well above average and are higher than groundwater levels recorded in the previous year.

The 2022 [Murray groundwater areas allocation statement](#) describes our review of allocation limits in the Murray groundwater area in response to climate change and less recharge to aquifers in the area.
