

# WA's weekly fuel update

## Summary of current situation:

### What we have achieved this week:

- **Our emergency powers are already working** – WA now has access to the most detailed supply chain information of any state, allowing us to pinpoint problems and solve them quickly.
- We have put this information to good use – **working with fuel companies and distributors over the Easter weekend to minimise fuel distribution issues.**
- Petrol stations reporting **stockouts fell from 61 last Friday to 18 today** (out of 771 stations statewide).
- We're **expanding FuelWatch to include every fuel retailer across the State** from 1st May and have increased fines for those who don't accurately report their prices.
- **We're also making it mandatory for fuel retailers to report to FuelWatch when they are out of fuel.**
- Additional fuel is flowing into Western Australia, with **BP confirming they have secured an extra tanker of diesel** on top of their normal 10 shipments in April.
- Fuel companies continue to remain **confident that fuel shipments for April will arrive as planned.**
- We're keeping flights more affordable for Regional Western Australians by **extending the Regional Airfare Zone Cap (RAZC) scheme** – despite jet fuel prices continuing to rise.
- **Larger triple-trailer road trains** will be permitted to travel along **Great Northern Highway between Wubin and Muchea** – helping to deliver fertiliser, fuel and other essential freight to regions more efficiently.
- We're also **supporting freight operators to transport more milk and perishable food** by allowing trucks to carry an additional 10 tonnes per load.

### What we are working to address:

- **Keeping the WA economy strong** through the work of **Industry Support Working Group** identifying areas for government support.
- Using the **data from fuel companies** to assess where government action is needed to **support fuel distribution.**
- Continue working with industry and the Commonwealth to **clarify expected fuel shipments arriving in May.**

## National Fuel Security Plan - Level 2

### Keeping Australia Moving

Fuel supply continues to operate effectively, but localised supply disruptions are occurring. Federal and State Governments are taking precautionary actions to shore up supply.

**Using legislative provisions** to ensure timely information from industry.

Considering regulatory reforms to **improve freight efficiency.**

**Monitoring and reporting fuel station supply**, including diesel.

Monitoring **economic impacts on fuel-exposed industries.**
