

Industry Regulation fact sheet

Standardised Approvals Pathway Category 35: Asphalt Manufacturing

Standardised Approvals Pathway

The Department of Water and Environmental Regulation is introducing a Standardised Approvals Pathway under Part V of the *Environmental Protection Act 1986* for select lower risk prescribed premises categories. This pathway provides a defined application and assessment process where activities meet published eligibility criteria and are suitable for standard conditions.

Category 35 – Asphalt Manufacturing

The Standardised Approvals Pathway for this category is intended to apply to mobile or lower-capacity asphalt plants producing up to 50,000 tonnes per year. These activities are associated with surfacing large-scale industrial sites or road construction.

Type of Applicants	Category rationale
• Mobile or lower-capacity asphalt plants producing up to 50,000 tonnes per year • Operations with a separation distance of at least 1,000 m from non-industrial land uses • Asphalt manufacturing associated with surfacing large-scale industrial sites or road construction	• Asphalt manufacturing activities require consistent, repeatable condition sets that support the movement of mobile asphalt plants between prescribed premises • Asphalt manufacturing undertaken within defined production and separation distance thresholds, results in predictable and manageable environmental impacts • Asphalt manufacturing is a repeatable, well understood activity with largely consistent operational processes across sites

Eligibility requirements

To be eligible for a Standardised Approval under Category 35, applications must meet the eligibility criteria. The eligibility criteria is comprised of:

- activity criteria (detailed below)
- siting criteria (separation distances to relevant sensitive receptors, detailed in [Guideline: Category 35 Asphalt manufacturing: Standardised Approvals Pathway](#))

Activity criteria

Factor	Criteria
Authorised production capacity	The quantity of asphalt manufactured at the premises must not exceed 50,000 tonnes per annual period. The design capacity of asphalt manufacturing equipment and infrastructure must be less than 50 tonnes per hour.
Authorised plant	Asphalt manufacturing equipment and infrastructure must have been manufactured on or after 1 st July 2016.
Authorised process (material) types	Asphalt manufacturing can incorporate crushed and ground rock aggregates, as well as bituminous and asphaltic materials.
